

The 3D Architect Launches Photo Montage 3D Rendering Along With Its Other Services

October 01, 2015

October 01, 2015 - PRESSADVANTAGE -

Australia, Brisbane -- The 3D Architect, a company that offers architectural visualisation services to its clients, brings together 3D Rendering and Photoshop to give birth to Photo Montage Rendering that creates striking and photo-realistic impressions. A Photo Montage Rendering is an art of combining real life images of infrastructure around a property with the realistic model of the building to make the end product look more life-like and to accurately depict one's work by speaking for itself.

According to Kyle Standing, 3D Modeller and Renderer for the company, "3D Photo Montages help in keeping potential customers more engaged while visualizing our residential or commercial property designs, thus helping builders sell their properties more effectively. This is the need of the hour and we are doing it like none other."

According to Kyle, with the absence of 3D Photo Montages, a company runs the risk of falling out in a competitive market and this is one of their strategies to keep their clients engaged with the property they are selling.

Highlighting the importance of 3D Photo Montages, Kyle further opines, "This rendering is not only great for acquiring clients but also beneficial for the company since it cuts down rendering costs. Not every property is a stand-alone building and if a building is situated in the midst of an established area, 3D Photo Montage can help in merging the surrounding infrastructure with the realistic image of the building, without needing to spend time or money on rendering and modelling the surrounding area separately. More people are now interested to know how real our imagination could be and we are giving them that and more."

Market studies show that a poorly done 3D Montage can ruin the image of a rendering company. An inferior quality of photo montage is quite evident when the buildings look out of context or the surroundings have no relevance to the lighting used. This can only lead to negative impressions. Carlo Anderson, Sales Manager for the company elaborates on these lines by saying, "A property in its actual surroundings will always attract more customers. Our company incorporates 3D Rendering with real photography from the proposed

development site so that the viewer experiences the property in a more realistic manner while associating familiar points of interest. Our sales have increased in volume since the introduction of this service and we are expecting a further upward trend.?

Mr. Anderson also says, ?Our Company only charges the client the amount that is mentioned on the invoice and there is no scope for additional or hidden costs.?

About 3D Architect

The 3D Architect is a company in Australia that provides interactive and unparalleled 3D Visualisations. The company is like a breath of fresh air offering prompt and professional services at affordable costs all over Australia including Melbourne, Sydney, Brisbane and Perth. A team of creative, experienced and competitive individuals helps in producing 3D Architectural Visualisation that can revolutionize the world of potential customers.
