Dillon's Heating & Cooling Shared the Causes of Hot and Cold Spots

August 04, 2021

Lenexa, Kansas - August 04, 2021 -
Dillon's Heating & Cooling, a company based in Lenexa, KS, has shared the causes and reasons of hot and cold spots and the ways on how to fix them in a recently published blog post. Hot and cold spots are caused by uneven heating or cooling of the home by the HVAC system and these are not desirable not just because they result into discomfort but also because of higher energy costs. Through the process of elimination, homeowners and other property owners may be able to determine the cause of hot and cold spots in their home or property and apply the necessary solution. In the event that the solution is too complex or too difficult, professional HVAC technicians can provide the necessary repairs or adjustments. The blog post can be accessed at https://www.dillonsheatingandcooling.com/post/hot-and-cold-spots-in-your-home-what-they-are-and-how-to-fix-them.

Jeff Dillon, owner of Dillon's Heating & Cooling, says, ?Hot or cold spots in your home can be frustrating, especially when they are in rooms that you frequently use. Armed with an idea of what might be causing your problem, you can set to trying to fix it. However, if your problem is more complex, you need to enlist an HVAC professional?s help.?

He adds, ?A locally owned and operated HVAC company like Dillon's Heating & Cooling can not only help you regulate the temperature in your home but also find the proper size for your HVAC units. In addition to this, they can fix your duct-work or advise on a variety of other HVAC topics.?

Some of the typical causes of hot and cold spots in the house require inexpensive and relatively easy solutions. These include: blocked air vents; dirty air filter; air leak; solar heat; and thermostat in the wrong location. It is the air vents that deliver the warmed or cooled air to the rooms of the home. It is possible to check each of these air vents. Sometimes a vent is being blocked by a furniture, rug, or clutter. In addition, it is important to note that closing certain vents in a room that is not being used or underused is not advisable because it may damage the blower motor. Another possibility is the air filter may be too dirty such that the airflow is being obstructed.

If the homeowner or property owner has ruled out the above mentioned potential problems, the problem may be deeper. It could be duct issues; inappropriate sizing of the HVAC equipment, which may be too small or too large; or the layout of the home may be preventing the HVAC system from working efficiently and effectively. In these cases, it is important to get the necessary help from professional HVAC technicians. People can find out more about Dillon's Heating & Cooling by checking out its Facebook page at https://www.facebook.com/Dillonsheatingandcooling/.

Dillon's Heating & Cooling has developed the reputation of being a leading provider of HVAC services in Overland Park and Lenexa. Their team of professional HVAC technicians can provide appropriate advice to homeowners and other property owners in evaluating a range of HVAC products to guide them them in choosing the best HVAC system for their specific needs and preferences.

They can also provide HVAC repair services for which they have received hundreds of five-star ratings. They are also known to be the top provider of repair services for air conditioners and furnaces in Overland Park and Lenexa for both commercial and residential clients. It is important to realize that even if the problem with the HVAC system appears to be small and only requires a quick solution, continuing to operate the system before calling of professional HVAC technicians to remedy the problem can cause the issue to become worse.

Dillon's Heating & Cooling can also offer replacement or installation services for commercial and residential properties for which they have also received hundreds of highly positive ratings. They offer free estimates for HVAC repair, installation, or replacement services.
