

## **STEVENS Discusses Why Metal Buildings Are Ideal For Churches**

*July 30, 2021*

Middleburg Heights, Ohio - July 30, 2021 - PRESSADVANTAGE -

Ohio-based STEVENS recently released an article on how pre-engineered metal building kits are ideal for churches. The article emphasizes the affordability, durability, and flexibility of prefabricated metal buildings built with an open floor plan and tall ceilings, making them perfect as worship places.

To read the entire article, click on the following link, <https://www.stevensec.com/blog/metal-church-buildings>.

Cost-efficiency is one of the leading reasons for churches to opt for a metal building. Building with steel saves churches more money allowing them to invest in the community. Economical prefab steel buildings save church congregations thousands of dollars over other construction methods. A steel church building is quicker to construct than a traditional structure, thus saving time and money.

Another benefit of building with steel is that the pieces can be quickly assembled when delivered to the job site.

Pre-engineered metal church buildings are easy to expand and modify to fit the growth needs of the church. With steel, it is easy to add depth and length to existing rooms. The ease of assembly and minimal maintenance give prefabricated metal buildings an edge over traditional structures. The best thing about steel is that it requires little to no maintenance, unlike traditional wood material that requires routine upkeep.

The article emphasizes the fire-resistance property of steel that helps these church buildings stand up to natural disasters. STEVENS has been designing environmentally friendly steel church buildings in Ohio that are both eco-friendly and energy-efficient. Steel churches built by the steel building kit erector have better insulation and can save a significant amount of money month after month in energy costs.

STEVENS is a leader in the erection of metal church building projects. It has decades of steel construction experience and has been building pre-engineered metal buildings that are durable, economical, and energy-efficient. The top metal building company in Ohio emphasizes the quick and straightforward process of erecting constructions for churches that can keep the initial cost and maintenance down for a long time.

They boast a team of professional prefabricated metal construction experts that can complete the metal building project on time and within budget. Anybody with plans to start a metal church building in Ohio should get in touch with steel construction experts at STEVENS on its website.

Check out STEVENS' article on the 3 advantages of using a metal building for a recreational sports facility.

"articleBody": "Why Metal Buildings Are A Great Choice For Churches When most people picture churches, they think of an old brick building, stained glass windows, and high arches. But, you've probably noticed that many new churches today are choosing to build their buildings with metal. Pre-engineered metal buildings are becoming the go-to option when congregations look to build their new church. But why are more and more congregations worshipping in metal structures? Prefabricated metal buildings cost less, last longer, and provide the large, open space and tall ceilings needed in a place of worship. In the article below, we'll go more in-depth about why metal buildings are perfect for churches. The Modern Church What churches mean to their communities has changed a little bit over the past few decades. The church is no longer a building to be used once a week on Sundays or the special occasion. Now it's a place of community where you can create and grow relationships. This has also changed how the church is represented architecturally and how they use their space. To build churches the way they used to be built could cost upwards of a million dollars today. That's not practical to most congregations. Aside from that, many churches need a multi-purpose church building that can be used for the various events that the church hosts. Prefab metal buildings are perfect for this. Metal Buildings Save Money Churches need to stretch every dollar as far as they can so they have more money to invest in their communities. Building with metal will allow churches to save money during the construction phase. Economical prefab steel buildings are an excellent choice for a church because they offer the most structure for the least amount of money. Cost-effective steel buildings have the potential to save their congregation thousands of dollars over other construction methods, and the savings start immediately. Building with steel also gets the congregation into the new church much faster because pre-engineered systems can cut the construction time by about 33% on average. The time you save is priceless, but it can save you hundreds, maybe thousands of dollars on labor costs on your construction project. You also don't need to worry about the weather because the bulk of the construction takes place in a climate-controlled factory. When your pieces are delivered to the job site, they can be assembled like a giant erector set, so the construction is straightforward. Every piece of your structure will arrive clearly marked and

ready to assemble. Your pre-engineered metal Church Can Grow With You If your congregation is growing faster than you anticipated, metal church buildings can grow along with their congregations. Unlike traditional wood buildings, metal buildings are very easy to expand. All prefab steel buildings can be modified to fit your needs as your church grows. You can easily add extra rooms, add depth or length to existing rooms, or you could even consider adding a second or third floor. Your options are endless with steel buildings. Metal Buildings Assemble Quickly One of the other major benefits of metal buildings that we've already touched on is their ease of assembly. Compared to traditional structures, metal buildings are very simple and quick to erect. This appeals to the DIY types that might be members of the church and those who would rather work with a professional team of assemblers. Every church congregation needs a place to worship, and steel or metal structures can ensure that a church family isn't without a place of worship longer than necessary. Prefab steel churches require Minimal Maintenance No one enjoys routine maintenance, do they? If given a choice, any church would choose a structure that doesn't require frequent routine maintenance and upkeep. Steel is an excellent alternative to wood and other building materials with low maintenance costs and the ability to deliver long-term service without fail, making it a popular choice. Steel church buildings are resistant to fire and insects, and they can stand up to most natural disasters. Metal Church Buildings Are Energy-Efficient and Eco-Friendly Heating and cooling any building can prove to be expensive, especially if the building is old. Prefab church buildings can provide their congregations with up to 50% in energy savings because of the insulation method available. But not only do you stand to save a lot of money on your energy bills, but almost all steel in use today comes is recycled. That makes steel one of the most environmentally friendly building materials. And, if there ever comes a time when you don't need your building, you can have it recycled. That will allow it to be reused repeatedly because no matter how many times steel is recycled, it never loses its strength. Use A Solid Foundation To Build Your New Metal Church Building These are a few reasons that most new churches are choosing prefabricated metal buildings over all the other types of buildings to house their congregation. Steel churches save money when you build, they save money month after month in energy costs, and they are good for the environment. Pre-engineered steel buildings are the most efficient and cost-effective option when it comes to building a new church, and congregations everywhere are starting to take notice.
