Roof Works of Toms River Announces Expanded Residential Roofing Division

August 10, 2021

August 10, 2021 -
Roof Works of Toms River, a Toms River roofing company, is happy to announce the expansion of their residential roofing division. This is in response to the growing demand from residential homeowners across their particular area in New Jersey. They have expanded more manpower and resources to have more bandwidth in serving the said communities.

Their residential division focuses on any residential roofing material including asphalt shingles, metal roofing, tile roofing, slate roofing, cedar shake roofing, and flat roofing. From roof repairs, roof replacement, to roof installations and emergency roofing, this expanded presence will allow Roof Works to better serve residences and homeowners.

The expansion efforts of the roofing company are expected to enhance their services for various New Jersey communities and neighborhoods such as: Ortley Beach, Chadwick Beach, Cranmoor Manor, Woodville, Gilford Park, Vision Beach, Windsor Park, Wintringham Park, Barnegat Bay Estates, Brightwater Cottages, Silverton Estates and other nearby neighborhoods.

Sean Kelly from the roofing company says, ?As a local family owned and operated roofing company, we take pride in our local reputation in the community. With deep roots in the New Jersey community, we strive for 100% customer satisfaction, and ensure that all of our customers are taken care of. We view our customers as family. When you choose our company, you are not just choosing any roofing company, but a neighbor. Someone who you know will be around to honor and stand behind our work.?

The residential roofing services from Roof Works of Toms River can subdivided into various kinds of services. These include roof replacement, roof repair storm damage roofing, roof installations, emergency roofing, roofing inspections, and gutter replacement. Roof replacement services can be provided for shingle roofs, metal roofs, tile roofs, slate roofs, and flat roofs. They serve not just the Toms River community but also other communities in the area, including Jackson, Brick, Lakewood, Lacey, Manchester, Point Pleasant, Barnegat, Stafford, Berkeley, Beachwood, Little Egg Harbor, Freehold, and Howell.

Roof Works of Toms River can also provide residential roof repair in Toms River and surrounding areas. These could be for storm damage, leaking roofs, missing shingles, or roofs that are more than 10 years old. They also want homeowners and other property owners to know that they could be eligible for roof repairs, or even a new roof that could be funded by insurance. Repair services can be provided for asphalt shingle roofs, metal roofs, flat roofs, slate roofs, and tile roofs.

They can also provide new residential roofing installation that come with lifetime warranties. These residential roofs can be shingle roofs, metal roofs, flat roofs, slate roofs, and tile roofs.

Roof Works of Toms River can also provide emergency roofing services for residential properties. These include: emergency roof repair for various kinds of roofs and blue tarp services. They have specialists in storm damage repair caused either by wind or hail.

They can also provide a free 21-point residential roofing inspection. This inspection will be done to check on various items, including: overall roof and exterior health; siding and window?s condition; possible leak spots; storm, wind, and hail damage; roof?s structural integrity; roof seals; missing and broken shingles; chimney and skylight flashings; moisture issues, gutter and debris build up; mold or algae / plant growth; and fascia and soffit.

And finally, they can provide gutter replacement services for residential properties. The rain gutters are also important because these are responsible for effectively channeling the flow of rain water from the roof through the downspouts, and direct the water to the proper areas outside the home. Without the gutters, the roof can accumulate leaves and other debris, with the result that water can stagnate on the roof and overflow, possibly causing the roof to rust and rot. The gutters also prevent the water from settling around the basement and seeping into the foundation, which may weaken structural support.
