

Shatterproof Glass Bakeware Indicated As Solution Amid Reports Of Accidents Involving Shattering Cookware

October 07, 2015

October 07, 2015 - PRESSADVANTAGE -

Recent reports show a rise in the number of consumers treated in emergency rooms due to shattering glass bakeware, and Borolux Bakeware has announced that these injuries can be avoided by using shatterproof glass bakeware. "Bakeware that can shatter is found in nearly every home in the country," states a spokesperson for Borolux. "Millions of these pieces are produced every year, and thousands of consumers are injured every year due to glass bakeware shattering or exploding unexpectedly." It is to avoid such accidents that the company has developed a product line of shatter-proof borosilicate bakeware that is made in America.

The rise in incidents reported has raised much concern in the industry about what could potentially be causing these accidents. An article by scientists from the University of Alabama at Tuscaloosa suggests that manufacturers today are possibly not turning out the higher quality glass baking dishes that were once sold decades ago. Their research, in addition to a year long study by Consumer Reports, as well as a number

of other scientific reports, all concluded that soda-lime glass is the reason for the shattering bakeware. Due to

its low cost to produce, American manufacturers today use this type of glass to make cookware almost

exclusively. However, European manufacturers still use borosilicate glass.

Officials from World Kitchen, an American kitchenware products maker and distributor, have filed a lawsuit

against the scientists, claiming that faulty science was used to come up with the results. The officials state

that shattering is uncommon for glass baking dishes and is often the fault of the consumer when these issues

do occur. They claim that consumers are simply not following directions that are commonly included with

glass dishes. They recommend that consumers avoid placing hot glass bakeware on damp towels or in the

sink, and that they use caution and always allow ovens to fully preheat before adding the bakeware.

But Borolux wants to offer another solution. "It's not the fault of the consumers that they have had glass

bakeware shatter dangerously before their very eyes under normal circumstances. Our bakeware is shatter

proof," states a company spokesperson. "Our bakeware is made from a patented and original true

borosilicate glass formula, and that means our bakeware will never explode. Borolux bakeware is different

from all the others. We produce safe glass baking dishes because we believe everyone deserves a reliable

and safe way to cook and bake."

The company is proud of the fact that their shatter-proof borosilicate glass bakeware is made right here in the

USA. Currently they offer a 9.5 inch classic pie dish and a 9x13 baking dish for casseroles, lasagna and other

dishes.

Borolux provides a number of bakeware options, all manufactured from borosilicate glass, which has been

proven to be safer than the much more widely used soda-lime glass bakeware. Those who would like to learn

more can visit the company on their official website.
