

Kyle TX Roofers New Braunfels Roofing - Cool Roofs Inc. Recommends Asphalt Shingles For Homeowners In Texas

September 07, 2021

New Braunfels, Texas - September 07, 2021 -
New Braunfels Roofing - Cool Roofs Inc. has expanded its service to include Kyle, Texas. The company is now one of the best options for residential roofers Kyle TX has to offer.

The company asks homeowners to consider asphalt shingles for their new homes as they are the most widely used and most reliable type of shingles being used today. They are a jack of all trades roofing material that can withstand a wide array of weather conditions. This is especially useful for Texas which can see blazing heat in the summer and can even suffer from the occasional snowstorm such as Winter Storm Uri which hit the state in the Spring of 2021.

Asphalt shingles are designed to offer resistance to the elements such as rain and strong winds along with protecting those living inside the home from harmful UV rays. This balance between strength and UV protection is accomplished by using a multilayered design. Asphalt shingles are made of a base mat, a layer

of waterproof asphalt, and a top layer made of ceramic granules. The top layer shields the shingle and everyone inside the property from UV rays.

Based on the type of shingle, the choice of the base mat can determine the shingle?s thickness, strength, weight, and flexibility. There are two kinds of shingles that are most commonly in use today. Fiberglass shingles have a fiberglass mat for the base while organic shingles have a base composed of organic fibers such as paper.

Fiberglass shingles resist heat better and provide increased fire safety. They are, however, unable to withstand the cold climates as effectively as organic-mat shingles. Though organic-mat shingles are known to last longer than fiberglass shingles, given the infrequent occurrence of cold weather in Texas, most homeowners are recommended to install fiberglass shingles as they are also more economical compared to organic shingles.

Based on the design, asphalt shingles can be further categorized into three kinds - 3-tab shingles, dimensional shingles, and luxury shingles. 3-tab shingles are the most common and affordable out of the three. They are coated with mineral granules, giving the homeowners a choice of various colors to match the home?s aesthetic as they see fit. They routinely last for upwards of two decades on most homes. They get their name from the notch in the exposed layer that splits it into 3 tabs.

Dimensional shingles are made from two layers of shingles that are bonded together and a notch is randomly removed. They are also known as laminated or architectural shingles. They give the property?s roof a 3-dimensional look. They are very durable and can easily adorn a house for more than 3 decades. They are the most aesthetically appealing as they have a distinctive look that is easily visually identifiable. Finally, luxury shingles are also three-dimensional in their look and are even more expensive than dimensional shingles. They are meant to be an alternative to slate and cedar roofs. They are great for regions that suffer from typhoons and hurricanes as their weight makes them able to withstand strong winds.

A spokesperson for New Braunfels Roofing - Cool Roofs Inc. talks about their expansion to Kyle, Texas by saying, ?We aim to be the premier Kyle TX commercial roofing contractor. We are offering high-quality services that are backed up by impeccable customer service. We know being a business owner can be very stressful.
