

Dry Star Restoration Provides Water Damage Repair, Restoration, and Cleanup in Tempe

August 30, 2021

Mesa, Arizona - August 30, 2021 - PRESSADVANTAGE -

Dry Star Restoration, a company based in Mesa, AZ, is happy to announce that they are offering water damage repair in Tempe and surrounding areas. The company has been one of the top providers of water damage and fire damage restoration services in Arizona since 2012. Their team of certified professionals has a proven record of excellent response rates and experienced mitigation knowledge to minimize the disruption resulting from a disaster. They are strategically positioned to be able to take care of any residential or commercial property restoration requirements, whether large or small, from start to finish.

"Dry Star Restoration is a full-service water damage restoration company in Tempe AZ, responding to disasters in the surrounding areas," says Richard Appel, owner of Dry Star Restoration. "We are a family-owned company dedicated to helping Tempe residents and businesses get their homes and property back to pre-disaster condition. The Dry Star team of water extraction experts are on call every day, 24/7, so when disaster hits, we are there to recover the damage."

When providing water mitigation services, their first priority is offering safe, high quality, and exceptional customer service. For those who have suffered flood damage of any kind, their professionally trained and

certified water damage cleanup specialists can quickly and effectively provide a solution on short notice. They will not just fix the original problem, but they will also ensure that any affected area is professionally cleaned, sanitized, and deodorized.

From any emergency that a homeowner or property owner may encounter, whether it is broken or leaky pipes; toilet overflow and leaks; air conditioner leaks; bathtub overflow; sink overflow; crawlspace drying; sump pump failure; refrigerator, washing machine, water heater, and dishwasher overflow; or hardwood floor water damage, their water restoration technicians are all certified and highly trained in the most recent home water damage restoration and remediation methods and technology.

For instance, they use moisture detecting tools to determine where the water has migrated. All of these areas are appropriately dried and taken care of as well. If there is any structural damage, the structural element is repaired or replaced. Meticulous attention to detail and up to date techniques are used to prevent damage from buckling, delaminating, warping, and swelling. With their timeliness and professionalism, the unpleasant odors, mold, and other health problems will be avoided or eliminated.

In addition to water damage restoration services, they can also provide emergency asbestos removal in Mesa, Tempe, and surrounding areas. This is a vital service because microscopic asbestos fibers are invisible to the naked eye and these are odorless and tasteless. Furthermore, asbestos exposure does not result into any immediate symptoms, so that people may not realize they have inhaled or swallowed asbestos dust. After the asbestos fibers get inside the body, they never dissolve, and the body will find it very difficult to expel them. Over time, the trapped asbestos fibers can cause inflammation, scarring and possible genetic damage to the body's cells.

Home and other buildings that were erected before 1980 in the US contain asbestos in some form of another. It was a popular insulation and fire protection material during that time. Although the potential risks and possible links to lung disease were already known before the 1970s, asbestos continued to be used in homes and buildings until the growing number of lawsuits can no longer be ignored.

Aside from emergency water removal and asbestos abatement, Dry Star Restoration can also take care of sewage cleanup and removal needs. A problem with the sewer system can result into more serious problems. In addition to the unpleasant stench created, other issues such as fungi, viruses, and other pathogens can result into serious health hazards. If the sewage problem is left untreated, it can result into major structural damage that can be very costly to repair.

Those who require the services of professionals for 24-7 water damage restoration in Phoenix, Tempe, and

other nearby places in Arizona can visit the Dry Star Restoration website, or contact them through the telephone or via email.
