

Genesis Tree Service Explains How Golf Course Tree Maintenance Can Generate More Money

August 31, 2021

August 31, 2021 - PRESSADVANTAGE -

Genesis Tree Service has recently published a blog post on how tree maintenance for a golf course can generate more money. The article points out that tree maintenance services are particularly essential in properly maintaining a golf course because trees have a vital role in providing a healthy ecosystem on the property. And a golf course that is properly cared for, including sand bunkers, tee boxes, and cart paths, including healthy trees tend to attract more players, which increases revenue.

Pedro Velasquez, owner of Genesis Tree Service, says, "Certain aspects of golfing require the grounds to be kept in the best condition. For instance, it can be quite difficult for a golfer to land the ball on a targeted fairway that is not well maintained. Similarly, a putting green that isn't given proper attention could compromise the players' efforts and even safety. These must be kept closely mown, which takes quite a lot of work. It is also important to check for signs of stress in the grass, especially during high temperatures, humidity, pest infestation, or frozen conditions."

It is important to note that the best practices for golf course maintenance is to ensure the careful balance between chemical and physical treatments. These best practices will make sure the best yield of turf is achieved, while ensuring that expenses are minimized while the healthy green state of the turf is maintained by regular mowing. By establishing an appropriate general maintenance plan in combination with a dependable and efficient pest management plan that will help golf courses of any size to have healthy green golf course.

The best practices for golf course maintenance have a number of components. These include: irrigation, chemical treatments, aeration, trimming, tree care. The right amount of irrigation is necessary to ensure that a golf course attractive, healthy, and functional. Chemical treatments like fungicides, herbicides, and insecticides in adequate amounts are also necessary. The proper balance must be attained to ensure that these chemicals are strong enough to do the work they have been designed to do while minimizing their negative impact on the environment. Trimming the grass and repairing the divots are also vital to keep the grass green and healthy.

And tree care is also a necessary component of golf course maintenance because trees offer shades for the grass and for the players, especially during summer. Trees have many uses for a golf course. First of all, trees can be provided as habitats for birds and other animals. In this regard, even dead branches can serve a purpose. Of course, tree professionals should be consulted to ensure that the dead branches of trees do not pose a risk to people. Second, they can be utilized as framing trees as part of the aesthetics of the course. Third, trees can be used for their shade, particularly in non-turf areas, such as restrooms, refreshment stands, outdoor dining areas, and clubhouses.

A fourth way to use trees in a golf course is related to the game itself. They can be utilized as directional and obstacle trees. They can be added to make a particular hole uniquely challenging. And as directional trees, they can be used to help the golfer line a shot. Fifth, trees can be used to protect unsuspecting people from being hit by errant golf balls. Sixth, they can also be used as signature trees, as a symbol for a particular course. Seventh, they can be used as screening trees or as cover for unwanted views that disrupt the beauty of a golf course. Eighth, trees can be used to identify doglegs or where a hole shifts from being straight to curved. And finally, trees can be used as backdrops for the greens.

In most of these, a tree professional will be required to ensure that a tree will really serve its purpose and at the same time, it will not pose a danger to people. Genesis Tree Service is ready to provide tree experts advice, tree trimming and tree removal services for golf courses.
