

Perth Dentist Offers Free Invisalign Consultation in Connolly WA

September 02, 2021

September 02, 2021 -

Connolly Dental Boutique is happy to announce that they are offering free Invisalign consultation in Connolly, Western Australia. People will be asked to fill out the online form on their website and their dentists will suggest a treatment plan for each individual to improve his or her smile. The information provided by each patient will be used to better comprehend each individual?s concerns regarding their current smile and a recommended treatment will then be made. Invisalign treatment is suitable for both teenagers and adults.

Dr Lily Taheri, Principal Dentist at the dental practice, says, ?We utilise the most advanced and innovative digital technology to give you a glamorous smile. We make a 3D image of your teeth that lets us see what's going on and helps us design your treatment plan. You are able to ?test drive? your new smile before committing to any treatment. Having your ?ideal smile? in mind from the beginning gives you peace of mind before starting any dental procedure.?

The Invisalign procedure begins with a simple scan that the dentist can use to provide the patient with a

glimpse of how his or her smile will look in the future after treatment. The dentist will also use the scan to establish a roadmap on how the patient?s teeth will transform over time. Next, the custom aligners for the specific individual will be 3D printed. The patient will then comfortably wear the aligners for the next six to 18 months, gradually changing aligners while the teeth move to their new position.

Meanwhile, Dr Lily Taheri is currently the only cosmetic dentist in Western Australia holding the Mastership certification in Digital Smile Design (DSD). She has trained as a cosmetic dentist in various parts of the world. She was trained by Didier Dietschi and Pascal Magne in Switzerland, Professor Fradeani and Angelo Putignano in Italy, and Christian Coachman in New York. Most recently, she had trained under Master Paolo Kano in Brazil, who is regarded as the father of digital cosmetic dentistry. She is also a firm believer in holistic dentistry, bioemulative dentistry, and facially driven aesthetics using digital technology.

In DSD, the most innovative and advanced digital technology is used to design the best possible smile for a particular person. With this technology, patients are able to see the new smile that will result from the treatments, thus, they will have peace of mind before the treatments are started. Cosmetic dentistry offers a remedy for various problems, such as: missing teeth; discoloured or stained teeth; white spots; crooked teeth; teeth that appear too small for the individual?s liking; teeth that break or chip easily; misshapen, damaged or decayed teeth; and more.

There are many advantages of cosmetic dental treatment. These include: more self-confidence; improved dental hygiene, which prevents cavities and gum disease; no more discomfort when eating; more enjoyable socialising because the individual feels better about appearance; fewer headaches; younger look; long-lasting, natural results; minimally invasive procedures, so recovery time is usually quick; dental implants, bridges or dentures; and bite correction.

Aside from Invisalign, they also offer other kinds of cosmetic dental treatment to enhance the patient?s smile. These include: stain removal; white composite fillings or porcelain inlays; veneers; teeth whitening; dental crowns; and dental implants, bridges or dentures. Teeth whitening is a popular treatment that is designed to lighten the colour of the teeth. This is often desirable because teeth become yellowed over time due to several reasons. Teeth may also be stained by smoking or drinking certain beverages.

Veneers are thin pieces of porcelain material that are glued onto the front of a tooth not only to enhance the individual?s smile but also to protect the surface of the tooth from damage. And dental crowns and bridges are fixed prosthetic devices that are cemented on existing teeth or implants to cover or a damaged tooth or implant.

Those who are interested in learning more about the various services provided at Connolly Dental can check out their website, or contact them on the phone or through email. They are open from 8:00 am to 8:00 pm, from Monday to Friday, and from 8:00 am to 5:00 pm on Saturdays.
