September 07, 2021 -

Ask Dave Taylor, a successful YouTube channel, is pleased to announce that they have published two new articles on their website.

While the popular tech channel focuses on offering honest, objective reviews of electronic hardware, Dave Taylor of Ask Dave Taylor also has a website that is dedicated to supporting these uploads with accompanying software guides and text reviews. Through these spaces, Taylor looks to reach and help digital communities around the world, offering his expert assistance and a thorough guide on how to navigate the most commonly used applications and websites.

His latest article explains how to install and use PowerShell in Windows 10. While Windows PowerShell is a newer, improved alternative to Windows' classic Command Prompt, he acknowledges that this feature-rich application can be difficult to navigate. While its rise in popularity has attracted many new tech enthusiasts to try it out, many are struggling with setting it up and getting it working properly.

The article covers everything that one may need to make a complete switch from the classic Command

Prompt to the new application. Taylor starts by explaining how to install the new Microsoft tool (which may perhaps be the easiest part of the entire process, and many computers already have it installed by default). He then shows a step-by-step explanation of how to set it as the default command prompt application for Windows 10.

Taylor also briefly discusses Windows Powershell's customizable options and how to access them. The new tool offers options very similar to the classic command prompt. It allows users to change the app's font type and size as well as a window's preview type and color. Once this is all set up and customized according to the user's preferences, Taylor says that they are all ready to use the new application. It should have the same functionality as the classic Command Prompt ? all of the same commands should work on PowerShell as well. Many new features are available, though he believes that only advanced users would be able to take advantage of the vast majority of them.

Taylor's expertise has helped countless people struggling to keep up with technological trends, though what most people note and highlight is his positive, helpful attitude. He says, "I've been answering tech questions since before Facebook was around. Helping others has always been an important part of my career, and I certainly enjoy guiding others and helping them avoid hardship. What started as a small past-time is now something that many people look forward to, which is a great honor for me."

The Ask Dave Taylor website has over 6,000 How-To articles, and this makes it one of the most well-rounded, comprehensive resource archives on the internet. As for his YouTube presence, Taylor has posted hundreds of product reviews, and his channel has seen significant success since its creation back in 2007. The Ask Dave Taylor YouTube channel has amassed over 9 million views over the years, and Taylor endeavors to post updates and new videos every few days.

As for Taylor himself, he has been in the computer industry since 1980. Having been online since the internet's beginnings, he is widely considered one of the pioneers of the internet who contributed to making it the massive source of information and communication tool it is today. His credentials include a Bachelor's Degree in Computer Science from the University of California, San Diego, a Master's in Education from Purdue University, and a Master's in Business Administration from the University of Baltimore, Merrick School of Business. He teaches both undergrad and graduate classes at the University of Denver.

Taylor's commitment to helping the online community is not limited to the electronics reviews on his channel and his website. He offers tech support for Mac, Windows, and Linux systems as well as guidance on how to manage social media. iPhones and Android devices are also within his area of expertise. Due to his background (and involvement in several online startups), Taylor also offers business advice and insight into the world of tech conferences.

Those who wish to learn more are welcome to visit either the Ask Dave Taylor Youtube channel or website to get started. Dave Taylor can be reached for further inquiries as well.
