Ask Dave Taylor, a YouTube channel dedicated to consumer electronics and electronics reviews, which also has a Q&A tutorial website offering online help and customer technology support, has recently answered the question on how to access ?On This Day? archival posts on Instagram Stories and share them. The question came from an Instagram user who noticed another user posting an ?On This Day? entry on his or her Stories. The question is how to gain access to On This Day archival content to be able to do the same.

To be able to create a Story on Instagram, the user goes the Creator screen by swiping from left to right. The user will then swipe along the icons near the bottom of the screen to find the stopwatch, which is for ?On This Day.? Instagram will choose an older post and offer that as the basis for a new Story. On the top of the screen, Instagram provides a link that allows the user to see all of the older posts and choose from them. After choosing one, the user can use the different tools provided along the top of the screen to make the On This Day post more interesting.

After making the desired edits to the post, the user can share it to friends and followers by tapping on the arrow on the lower right. There are various options how to share the Story. It can be widely disseminated widely so that it will also be shared on Facebook. The Story can also be shared to a limited number of people, such as close friends only. Or the user can choose specific people only among his or her friends.
