

Drystar Restoration Is Offering Water Damage Restoration Services In Phoenix

October 05, 2021

Mesa, Arizona - October 05, 2021 - PRESSADVANTAGE -

Drystar Restoration & Construction LLC is offering water damage restoration in Phoenix, Arizona where Hurricane Rosa and Hurricane Sergio were two category 4 hurricanes that hit Baja, California in 2018. When Hurricane Rosa reached Arizona, the rainfall peaked at 6.89 inches and caused flash floods that killed two people. It also caused significant damage to countless properties across the state. With the prospect of global warming changing the surface temperature of the waters of the Atlantic ocean, scientists predict that future storms will be stronger with more intense wind speeds. Stronger hurricanes mean a larger risk to properties that bear the brunt of the storm. Whenever there is a weather warning, it is strongly advised to harden one's home to protect it from being damaged.

When the hurricane passes and the house manages to survive the worst of it, it is crucial to get the extent of the damage looked at by a professional restoration expert that can come in and correct it. Water damage tends to rot the home's innards, weakening its structure and making parts of it susceptible to collapsing, taking the rest of the structure along with it. A restoration expert will be able to spot the exact problems that have the potential of worsening over time and nip them in the bud.

Phoenix water damage contractors Drystar Restoration & Construction LLC have developed a solid 6 step process to identify and solve problems related to water damage in a property. In the first step, the homeowner or business owner whose property has been affected calls the company in a time-sensitive manner, preferably within 24 hours of first noticing a water leakage. The company then sends over its professional technicians to inspect and assess all of the home's or building's areas for water damage. The third step is to remove all the water from the flooded areas to prevent it from damaging the building more than it already has. The extraction also helps in reducing drying times so that the company can quickly get to work with the restoration. The drying process uses specialized equipment that speeds it along, reducing the chance of mold damage. In the fifth step, the technicians will perform odor removal and deodorization treatments. They will also clean the walls, flooring, furniture, upholstery, clothing, and other restorable personal items that were damaged by the water. Finally, in the final step of restoration, the company performs repairs such as replacing drywall, installing new carpet, or performing any needed reconstruction.

A spokesperson for the company talks about its services by saying, "When we get called to a site, we come fully prepared, ready to conduct a thorough preliminary investigation. We use the latest moisture detecting technology to determine where the water has migrated within your home or place of business. We address all of those areas and properly dry them before moving on to fix the big structural damage that needs repairs or replacement. We follow top-notch industry-standard techniques to prevent damage from warping, swelling, buckling, and delaminating. We manage to deliver all of these services with the best-in-class customer service, making sure that your needs are taken care of every step of the way. You can just sit back and watch us work our magic, fixing the damage caused, and restoring your home or office to its former glory."

A recent review of the company's services highlighted on its website says, "When my house flooded I called Drystar and they were there within 30 minutes. They were very professional and handled everything for me. They packed my house up, did the dry out, and even did the remodel. Drystar went above and beyond to ease my stress in a very stressful situation. I would highly recommend them to anyone."

Drystar Restoration & Construction LLC can be reached at the phone number (480) 664-4264 24 hours a day, 7 days a week for all business inquiries. The company also provides other services such as fire restoration, mold remediation, storm repair, sewage cleanup, and emergency asbestos removal in Phoenix.
