Bexley Dental Offers Wide Range of Cosmetic Dentistry Services in Bexley

October 11, 2021

October 11, 2021 -

Bexley Dental, a dental office based in Bexley, NSW, Australia, is pleased to announce that they offer a complete suite of cosmetic dentistry treatments in Bexley and surrounding areas. This is in line with the growing popularity of cosmetic dentistry all over the world, which was valued at US$ 6.9 billion in 2020 and projected to grow at a compound annual growth rate of 5.0 percent from 2021 to 2028. More and more people are getting interested in improving dental aesthetics as the industry has undergone significant advancements. The dentists at Bexley Dental have kept up with these developments and are experts in cosmetic restorations such as crown and bridge restoration, inlays and onlays, veneers, teeth whitening, composite white fillings, orthodontics, other restoration work, and implant dentistry.

A spokesperson for Bexley Dental, says, ?We would all love to have a perfect set of sparkling teeth, but for many of us, that is far from reality. You may have had fillings when you were younger that have left your smile less than perfect. If you have amalgam fillings in your mouth, you?ll be only too aware of the silver patches in your teeth that are on show when you smile and laugh. The fillings stand out like a sore thumb and can make you incredibly self-conscious. Alternatively, you might have severely damaged or missing teeth that are tainting your appearance. Fortunately, there are cosmetic dental treatments that can help with all of these

issues.?

The composite white fillings provided by the best cosmetic dentistry service in Bexley offer a better alternative to conventional amalgam fillings. Composite resin or ceramics are also being used to replace amalgam restorations because of the fear of the toxicity of mercury that is contained in dental amalgam. Aside from not containing mercury, they are tooth coloured, which means that the filling will hardly be noticeable. At Bexley Dental, they will remove the amalgam in a safe and controlled environment and then refill the cavity with composite resin or ceramic. Having white fillings will not only help with the restoration of a damaged tooth but patients will also no longer feel self-conscious when they smile.

Meanwhile, inlays and onlays are a cosmetic dental treatment where only the decayed areas of the tooth are removed and the healthy tooth structure remains intact. Using advanced technology, they are able to take a precise impression of the prepared surface of the tooth. This impression is then utilised to create a tooth coloured porcelain restoration that is known as an inlay or onlay. This treatment offers the benefit of allowing patients to avoid root canal treatment in the future. And because tooth coloured porcelain is used, the restored tooth looks very much like a natural tooth, allowing the patient to smile without feeling embarrassed.

A dental crown or bridge may be recommended for stained, cracked or damaged teeth. A crown is used to cap a tooth to help the affected tooth regain its normal shape and size. It has several purposes, such as to support large filling, attach bridge, restore fractured teeth, protect weak teeth to prevent fracturing, cover discoloured or badly shaped teeth, or cover a dental implant. A dental bridge is used to fill the space left by missing teeth. Once again, this treatment allows patients to smile without being self-conscious.

Teeth whitening is one of the most common cosmetic dental treatments. In fact, there are now many non-professional teeth whitening services available in malls and shopping areas. There are also cheap whitening kits being offered in stores. However, professional teeth whitening is still preferred and recommended because in-chair whitening that is done in just 36 minutes can last for up to three years. The results from over-the-counter kits can only last for one to two weeks.

Established in 1990 by Dr. Theo Spyrakis, Bexley Dental has grown into a practice that includes four dentists and three hygiene therapists who are all ready to help patients who are unhappy with their smile. They are experienced in a wide range of cosmetic dental treatments that can help put a smile back on their patients? faces. Whether teeth are stained, chipped or damaged, there is no longer any need for patients to feel embarrassed after undergoing the treatments they provide.

Those who are looking for an affordable cosmetic dentist in Bexley and neighbouring areas can visit the

Bexley Dental website, or contact them through the telephone or via email. They are open on Mondays and Thursdays, from 8:00 am to 7:00 pm; Tuesdays and Wednesdays, from 8:00 am to 6:00 pm; Fridays, from 8:00 am to 5:00 pm; and Saturdays, from 8:00 am to 1:00 pm.
