Colorado based Wireless Pro has launched a new kids learning toy tablet, designed with early education in mind. The children's multimedia learning toy tablet is designed with music, sounds, numbers, letters, and words, and has six modes of play and more than 40 buttons for children to explore.

Carlos Salguero, spokesperson for the company, states, "We've designed the kids tablet to be perfect for toddlers to learn and explore their world. Parents can play with their kids and help them to learn through a number of games and activities."

The toy tablets for kids feature the alphabet and numbers, as well as other learning tasks to help teach toddlers at a young age. As an increasing number of school districts push for higher levels of learning, more and more children reaching kindergarten age are being forced to learn certain things at home, before they even begin school. "Kindergartners used to learn their ABCs and how to count," states Salguero. "Now they practically have to be able to read before they even begin school, which is one reason we've designed this toy."

With the fun games and activities designed for children ages two to four, the learning toy tablet is designed to help pave the way for early learning. Children can begin to comprehend their numbers and alphabet and as they age, move into more difficult tasks using this toy, essentially preparing them for kindergarten.

The learning toy tablet has been provided with larger buttons compared to those of a standard tablet, to make it easier for children to use, and offers a colorful keyboard with numbers, pictures, letters, and various different modes of play, all designed to aid in the learning process for toddlers. Different to electronic tablets like iPads this learning toy tablet is made of BPA free plastic with no breakable screen, making it drop proof and nearly break proof.

Carlos Salguero says that the company also considered the needs of the parents when they designed the toy, giving it volume control for quiet play. A quiz mode is also included, which allows parents to test what their children are learning.

The new premium children's learning toy tablet is now available on the Amazon marketplace. More about it can be seen on the seller's page. Those interested in learning more about Wireless Pro can visit them on their official website.
