Electronic Merchant Systems Offers Payment Payment Processing and Merchant Services Solutions Nationwide

October 28, 2021

Cleveland, Ohio - October 28, 2021 -
Electronic Merchant Systems, a company based in Cleveland, Ohio, has announced that they are offering payment processing and merchant services solutions for all business types all over the United States. EMS can assist businesses that don?t have space for a credit card machine or don?t have a physical store in accepting credit cards and debit cards through mobile processing. They can also help businesses that need virtual terminals for processing secure online payments.

?EMS' payment processing is designed to be simple for customers and seamless for you,? says Bill Felberg, EVP of Sales for Electronic Merchant Systems. ?However, there are so many different ways a business can process payments, that it can be overwhelming to choose the best option for your company. That?s where we come in. We?ll tailor a local payment processing setup to your specific needs and provide tools you can use across your business to save money, streamline operations, and drive sales.?

For those who require a mobile processing solution, Electronic Merchant Systems offers EMSmobile. It provides a simple but powerful mobile payment acceptance alternative for any business that wants to get paid on the go. EMSmobile is compatible with both Android and iOS devices. It provides a card reader that can connect to the business owner?s device using Bluetooth. With the EMSmobile solution, it is possible to: dip, tap, or swipe credit cards; create itemized or simple transactions; accept tips and manage cash payments; track and control inventory; and allow multiple users at the same time.

For those who require an e-commerce solution, EMS offers a Virtual Terminal that will allow customers to place their orders or pay securely on the web. The EMS Virtual Terminal is an interface that is integrated into a payment gateway and the user can run the gateway as if it were a credit card terminal on any computing device, including mobile devices.

The EMS Virtual Terminal has several features. These include custom email invoicing; secure vault storage; recurring payments; and reporting and analytics. With email invoicing, business agility is improved. The business owner can simply send an invoice through email and customers can make fast and secure online payments. The user also has access to a secure portal that allows the monitoring of invoices that have been viewed and paid. This portal can also be used to resend receipts.

The Secure Vault Storage feature of the EMS Virtual Terminal ensures that customer card information are kept securely for future purchases or billing. By creating a profile for each customer, the user will no longer have to keep requesting for credit card information for every sale. And with their Account Updater technology, it is even possible to update outdated card information without having to send a request.

EMS Virtual Terminal also allows the set up of an automatic recurring billing schedule for customers who have outstanding balances or monthly subscriptions. The user will simply need to set the schedule and the technology takes care of the rest.

And finally, through the EMS Merchant Console, businesses are able to manage the key aspects of their business. This portal allows them to review the status of email invoices, manage inventory, view all transactions, analyze sales trends, and more.

EMS has also partnered with reputable companies that offer payment gateways. EMS users are able to easily integrate payments into their selling platform. Improved development features include: integration of payments into any application with native SDKs; easy embedding of mobile-responsive and mobile-friendly payment forms to the user?s payment gateway; reuse of tokenized cardholder data from past transactions without the need to store or secure it; and support for various APIs.
