TK Roofing & Gutters Identifies Signs of Storm Damage in Akron, OH

November 04, 2021

Akron, Ohio - November 04, 2021 -
Akron-based TK Roofing & Gutters has added a new blog post detailing what qualifies as roof storm damage. The storm damage expert suggests annual roof inspections and hiring a professional roofing company. The blog post warns that a damaged roof left in disrepair can cause severe damage to the property to the extent that the building might need a complete roof replacement.

Common types of storm damage must be addressed right away. The blog post identifies wind damage as the most common type of storm damage, which can deteriorate shingles and affect the roof?s structural integrity.

A thorough roof inspection is the best way to keep up with the life of the roof. If there is damage, TK Roofing would be able to do a storm damage roof repair quickly before it continues to cause problems. The blog post explains that hail can cause a significant threat to the integrity of the roof. Daryl Gentry, the owner of TK Roofing & Gutters, explains, ?Roof hail damage could go undetected for the next few storms until the true extent of the damage is realized and more damage has been done.?

Gentry advises homeowners to perform a thorough inspection after a hail storm damage to detect any damages and avoid a total roof replacement.

Water causes significant damage to a roof after a storm due to multiple sources, explains the Akron roofer, adding that it can weaken the property's structural integrity. The blog post identifies holes in the roof, ice dams, stains on walls as the most telltale signs of water damage.

According to the blog, a leaking roof could be a sign of cracks in flashing. ?If your flashing is broken or not fastened properly, it won't keep the water out. Tar used to seal the flashing can also corrode over time, leaving your roof vulnerable to cracks and water leaks,? says Gentry.

The blog post explains that some of the common signs of roof damage are easy to spot, advising homeowners to look for key things to detect storm damage. The condition of shingles is one, states Daryl Gentry, adding that homeowners should also pay attention to the loss of granules and granule buildup on shingles or in gutters. The owner of the Akron roof replacement company says, ?Hail storms can ding or dent asphalt shingles, cause missing or damaged flashing, loose sealant, and water damage in the ceiling or attic.

The blog post asserts that all signs of damages are not obvious and some are tough to detect, advising homeowners to call in a professional roofing expert for the job. TK Roofing & Gutters is a professional Akron roofer that knows precisely what to look out for and notice any signs of storm damage to the roof.

Homeowners looking for professional Akron storm damage experts can contact TK Roofing and Gutters. The certified roofing contractors have the experience and knowledge to detect damage and repair it. They are happy to contact the homeowner?s insurance company, meet with the insurance adjuster, and give homeowners a free roof inspection.
