As a guide to patients, the Bluffton dentist explains how some common dental procedures are done. The dental professional believes that knowing the jargon will give patients an edge and keep them calm during their dentist appointment.

The most common is prophylaxis or teeth cleaning, usually done twice a year. Prophylaxis is one way to keep the mouth in good health and present other illnesses. The procedure involves the removal of tartar and plaque.

The Best Teeth Cleaning clinic also performs dental implants to replace missing tooth roots. Another procedure they offer is the Same Day Crowns. According to Off-Island Dental, with the advent of technology, a custom-made dental crown can now be made in just one day.

One solution Off-Island Dental offers for damaged teeth is Root Canal Therapy, an endodontic treatment that involves opening the tooth and removing the damaged pulp or nerve. For teeth with cavities, Off-Island Dental recommends dental fillings. The most common filling used is an amalgam, which is a mix of mercury, silver, tin, and copper. However, for a more natural look, a composite filling is highly recommended by Off-Island Dental.
