

Smile Designs 101 Shares Information About Their Dental Implant Services

November 23, 2021

November 23, 2021 - PRESSADVANTAGE -

Somerset, New Jersey based cosmetic dentist Smile Designs 101 is encouraging their community to learn more about their dental implant services. Dr. Kosmas Kasimatis, D.M.D. and his team are dedicated to offering the residents of Somerset and the surrounding areas friendly and affordable family dentistry.

Dental implants are a safe, reliable and long-lasting solution to missing teeth, and they are also an affordable alternative to traditional restorations. Ever since their introduction, they have been a transformative procedure in restorative dentistry, providing an affordable option for many patients. Implants can also help patients who have dentures or bridges, as they can stabilize these restorations.

Smile Designs 101 explains that a dental implant is a small titanium screw that serves as the replacement for the root portion of a missing natural tooth. These screws can either be placed in the upper or lower jaws and can replace single or multiple missing teeth, depending on the needs of the patient. Over time, the titanium material actually fuses with the bone and becomes a good anchor for the replacement tooth.

Dr. Kasimatis says, "Missing teeth can affect your daily life in more ways than one. Not only are you left without the full function of your teeth, they can also affect your smile, your speech, your self-confidence, and subsequently, your mental state. If you get a dental implant, it can help you deal with all of these issues. We have always worked hard to help patients with dental implants that have provided them with improved appearance, speech, comfort and quality of life, and we would be glad to help you as well."

According to the clinic, the dental implant procedure begins with an in-depth examination of the patient's jaw bone and mouth structure. By using cone beam CT scans, the dentist will be able to determine whether a patient can safely receive a dental implant or not. After that, small titanium implant posts are placed into the patient's jaw bone in place of the natural root. Following the surgery, the titanium implants slowly fuse with the bone through a process known as osseointegration. Once that process is complete, the implants become immovable, stable anchors for new teeth, and the patients will be able to bite, chew, speak and smile without concern.

The cosmetic dentistry services provided by Smile Designs 101 have helped the residents of Somerset and the surrounding communities a great deal, earning the clinic a lot of praise. On the Google platform, Smile Designs 101 has a stellar rating of 4.8 out of 5 Stars. Maria Flores writes here, "Dr. Niru is my regular dentist. Her and her assistant, Lisa, are truly the best. They have great bedside manner, and they are so nice and amazing at their job. Dr. Kasimatis is doing my implant, and he is very knowledgeable at what he does. All of the ladies at the front desk are so nice. I highly recommend this dental office."

In another review, Rev. Fr. Joy John praises both the staff and the services of the dental clinic, writing that, "Smile Designs 101 is an excellent group of dentists! They are warm, welcoming, and most importantly, the procedures are painless! The doctors and staff keep the office extremely clean and make the experience all the more enjoyable. They're always available for dental emergencies and ensure that you're taken care of 100%. The staff do a thorough job following up with you after procedures to make sure you're healing properly and without any discomfort. I highly recommend this team of dentists and staff for you and your family!"
