

Meet Positives Helps Users Find Other Positive Singles

November 26, 2021

Chicago, Illinois - November 26, 2021 - PRESSADVANTAGE -

US based Meetpositives.com, a site dedicated to helping people who have chronic sexually transmitted diseases meet others facing similar circumstances, would like to reach out to those who might find the dating site useful. With a secure, accessible site and an application in the app store, Meetpositives.com is the number one resource for positives looking to find love and connect with others who have had the same experiences. It is a safe space where they can share their story and hear others' without having to worry about judgment.

Dating is difficult for most people ? and is many times harder for individuals with chronic STDs. There is widespread stigma against such conditions, and many have difficulty meeting nonjudgmental people to speak to. The dreaded ?talk? gives many positive singles a great deal of anxiety as they can never be sure how their partner might react to the news. With Meetpositives.com, it becomes much simpler and easier to meet people. The developers behind the website understand what keeping a secret feels like, especially why keeping certain secrets may be necessary. This is why they strive to offer a place where members need not worry about being discriminated against for having an incurable condition.

?We have 20+ years of trusted matchmaking under our belts, with a dedicated Trust and Safety team by your side,? says Meetpositives.com. ?That means no bad players, just genuine people looking for real

relationships. Since 2019, Meetpositives.com has been a standalone STD dating site for positive singles. Unlike other STD communities, our platform is not a part of an affiliate network; rather, Meetpositives.com is on its own and giving you the newest and most unique STD community experience. Positive singles log in and search on their desktop and mobile device from anywhere in the world.?

Sexually transmitted infections are everything but uncommon. In the United States alone, millions are diagnosed every year, and there are over 100 million cases across the country. The fact that the number of those who are infected is so high yet people seem totally unaware is evidence of how well chronic STDs can be treated and managed. Those who are infected can live a long and healthy life, and Meetpositives.com is one of the steps a positive single can take toward building a "normal" life for themselves by reaching out to others like them.

?At Meetpositives.com, we are not only interested in helping you find love, but also making it last long-term,? the dating site says. ?For this reason, we provide free advice and tips on how to build a strong relationship that will lead to happiness. We have created a community where you can share all of your concerns and information that you feel will help others. From this community, you will also get something in return. You will receive important details about how to handle your condition and how to live well with other positives.?

Members tend to feel comfortable sharing their stories on Meetpositives.com due to the comfortable, safe nature of the online space. Countless individuals have shared their stories helping others who may have just received a diagnosis or who simply feel like they may be alone. There are multiple stories from members on the site, and those interested can read all about experiences with herpes and so on.

One user, in a member story titled "Herpes is not the end of the world,?" says that, "I made decisions that I am not proud of and thought that herpes and STDs were infections I could not get. I must have contracted the infection in one of the many parties I attended and ended up in bed with random people. That part of my life is behind me, but herpes came to my new life with me. You cannot tell that I am infected by just looking at me. You will have to get my blood and test it to believe that I am infected. This simply means that herpes is not the end of the world, and you can still go on with your life just like you are not infected, only that you will need to be careful not to infect other people.?"

Download the number one app for positive singles from the app store. Michael Task of Meetpositives.com can be contacted for further details as well.
