

NOVA Smile Studio Launches Dental Implants Service in Winchester VA

February 25, 2022

February 25, 2022 - PRESSADVANTAGE -

NOVA Smile Studio, a dental practice in Winchester, VA, is happy to announce the launch of their dental implant service for residents of Winchester and neighboring areas. They specialize in various kinds of dental implants, including single tooth implants, all-on-4 implants, multi-tooth implants, and full teeth replacement. The surgeries are to be performed by a dental professional with a board certification in Oral and Maxillofacial Surgery.

K.Raja, a spokesperson for NOVA Smile Studio, says, "We are happy to inform everyone in Winchester and surrounding areas that we are launching our dental implant service. This is for many people who are suffering from missing teeth, or dentures that are just too uncomfortable for daily use. Also, dentures just don't provide the usual bite strength they had been used to, thus hindering them in enjoying some of their favorite foods. Fortunately, dental implants can now offer a way to permanently replace missing or damaged teeth."

These dental implants are titanium cylinders that are in the form of screws that are placed securely into the patient's jawbone which will serve as replacement for the missing tooth's root. Just like the natural tooth root, these implants are firmly placed in the jawbone, which means they can function just like the real tooth root that provides strong support for the tooth. Furthermore, just like a real tooth, the implant will help in preventing bone loss that usually accompanies less permanent alternatives, such as dentures.

Single tooth implants are offered for patients who are missing just one tooth or a few that are far apart. For patients who need full teeth replacement, there is the all-on-4 dental implant procedure. It is an advanced dental implant technique where four or more implants are required. In the conventional dental implants procedure, to replace a full arch of teeth, eight or more implants would be needed. In the all-on-4 technique, the two implants at the back of the mouth are angled in order to avoid those areas of the jawbone that have low density and two implants in the front.

There are various advantages of the all-on-4 dental implant technique. These include: the elimination of the need for bone grafting; only four implants required to support a full arch; less invasive procedure, which

means shorter healing and rehabilitation process; much faster procedure; more flexibility to design and ensure that the optimum replacement teeth will fit; and the patient gets new teeth in as fast as 24 hours after the procedure.

They want to point out that full mouth implants are recommended for all patients who are suffering from damage, failing, or missing teeth. For instance, a person no longer has a fully operational set of teeth and this is affecting his or her daily life, especially because of concerns about their smile or what they can eat. Full mouth dental implants may also be recommended for people who have tried using dentures but were not fitted properly or are simply tired of wearing them because of the discomfort and the possibility of the dentures flying out of the mouth while they are talking. For those who have already wanted to have dental implants but were unable to because of loss of bone, they can ask about the all-on-4 dental implant procedure and consult with the dental professional on whether it is suitable for them.

To get a full mouth dental treatment at NOVA Smile Studio, a patient will need to undergo an assessment by their dental implant experts. It is a personalized evaluation and it will include discussions about the patient's medical history and the taking of a 3D x-ray, which will provide a precise picture of the patient's jawbone and the dental expert will use this to find out the optimum location for the implants.

Those who are interested in learning more about the services offered by NOVA Smile Studio can check out their website, or contact them on the telephone or through email.
