

## **FruX Home and Yard Explains Why Silicone Oven Mitts Are The Clear Choice For Any Customer**

*January 25, 2022*

January 25, 2022 - PRESSADVANTAGE -

Las Vegas, NV based FruX Home and Yard is recommending that their community look into silicone oven mitts and how they compare to other types of mitts. FruX Home and Yard offers a highly functional silicone oven mitt that can be purchased online, and the company is keen for their community to understand why they initially chose to craft this product with silicone. The company encourages interested parties to visit the following link for more information on the subject: [Are Silicone Products Sustainable And Eco-Friendly?](#)

Many will already be familiar with cotton mitts, which have been a staple in American households for decades. These mitts were prized in kitchens for their distinctive patterns and designs but any baker would also know that they were not very reliable for protection from the heat. In fact, the company points out that home cooks likely have an unconscious habit of hurrying from the oven because they only have a limited time to drop a hot dish before the heat seeps through to their fingers. This is backed up by science as well: cotton burns at 205 degrees Fahrenheit, but oven recipes tend to require between 350 degrees to 450 degrees Fahrenheit.

Some manufacturers will attempt to get around this by coating the cotton in a flame-resistant chemical or

including thick batting in order to provide more insulation to the wearer. Unfortunately, Frux Home and Yard found that these protective layers wear down over time. Notably, they can also wear out unevenly, making them prone to develop vulnerable patches that let the heat through much faster.

Frux Home and Yard also considered using neoprene fabric, a synthetic and non-toxic rubber that is capable of handling temperatures up to 500 degrees Fahrenheit. It can be used to cook in a variety of scenarios, from the grill to the oven, and only requires soap and water to clean since it is not absorbent. This also means it is much less prone to acquiring stains.

However, the company still did not think this was good enough for their customers. The next material they considered was silicone, and this was where they discovered an opportunity to make a great product. One of the most compelling advantages offered by silicone is that it is much easier to manufacture and does not damage the environment unduly. Silicone is made from silica, which is derived from sand. Unlike most plastics, which require crude oil to be mined at some point, silicone is made from environmentally safe materials. It is also more durable than plastic.

Frux Home and Yard adds that silicone is unfortunately not biodegradable. However, it is relatively easy to recycle and does not break down into microplastics either, which makes it ocean-friendly and less harmful than plastic.

The company's silicone oven mitts are excellent in kitchens thanks to the material's durable nature. In fact, it can withstand up to 450 degrees Fahrenheit as well as freezing temperatures. Plastic, notably, would crack or melt from exposure to such high or low temperatures, but silicone does not suffer the same vulnerabilities. Frux Home and Yard recommends that customers exclusively purchase products that are marked as "medical grade" or "food grade," as these are high-quality items that will reduce the presence of toxins in the home. It is for this same reason that the company opted to create their mitts out of FDA-approved, food safe silicone.

Customer reviews illustrate why the company's silicone oven mitts are so popular in their community. One Amazon review awards the product a full 5-Star rating, going on to compare the silicone mitts to cloth mitts. This customer previously attempted to substitute cloth mitts for another synthetic material (not silicone) that would continuously wear out and require homemade fixes. However, the customer eventually found Frux Home and Yard's silicone mitts. They share that, "They fit like a glove (pun intended) and are even comfortable. I can pick up a cookie sheet by the edge, with no threat of disaster. They are really flexible. The mitts run pretty high up my arm, so there is no need to be extra-diligent when taking things out of the oven. I even love the way the color matches my kitchen decor." The review concludes, "I recommend this product with absolutely no reservations whatsoever."

Those looking for extra long silicone oven mitts are welcome to shop for Frux Home and Yard products on Amazon to learn more about their products and why they are perfect for every kitchen. The company takes a great deal of pride in their creations, and they are always pleased to show customers the many advantages they stand to gain by incorporating them into daily use.
