

Perth Dentist Explains How Digital Smile Design Enhances Veneers and Smile Makeovers

January 24, 2022

January 24, 2022 -
Connolly Dental Boutique, a dental practice in Perth, Western Australia, wants to point out that digital smile design (DSD) provides an excellent solution for dental veneers and smile makeovers. With DSD, patients can view their new smile that they will have after the proposed treatment, such as a dental veneer. They use the most innovative and advanced digital technology to allow the patient to envision the predicted new smile after the treatment. This provides the patient with peace of mind even before undergoing the dental procedure.

Dr. Lily Taheri, Principal Dentist at the dental practice, says, ?We help you smile with confidence, making you feel and look your absolute best. We utilise the most advanced and innovative digital technology to give you a glamorous smile. We are able to envision and test drive your new smile before committing to any treatments, having your ?pictured smile? in mind from the beginning gives you the peace of mind before starting any dental procedure.?

Meanwhile, dental veneers are a layer of material placed over a tooth for the purpose of enhancing the

aesthetics of a smile and to protect the surface of the tooth from damage. These are typically made from porcelain and they are wafer-thin, custom-made shells that are designed to cover the front surface of a particular tooth in order to enhance the appearance of the patient?s teeth and their smile. Porcelain veneers are typically used for fixing discoloured teeth; teeth that are worn down; teeth that are broken or chipped; misaligned, irregularly shaped, or uneven teeth; and teeth with gaps between them.

Veneers are part of the cosmetic dentistry services that they offer. Cosmetic dentistry is designed to fix various problems, such as: missing teeth; crooked teeth; discoloured or stained teeth; white spots; misshapen, damaged or decayed teeth; teeth that appear too small for the individual?s liking; and teeth that break or chip easily. Cosmetic dentistry offers a number of advantages. These include: more self-confidence; socialising is more enjoyable because one feels better about one?s appearance; improved dental hygiene, which prevents cavities and gum disease; no more discomfort when eating; dental implants, bridges or dentures; fewer headaches; younger appearance; bite correction; long-lasting, natural results; procedures are minimally invasive, and faster recovery time.

Teeth whitening is another procedure that is part of cosmetic dentistry. Its primary purpose is to lighten the colour of the patient?s teeth. This is usually desired because the teeth become yellowed over time due to a number of reasons.

Another important cosmetic dentistry treatment is the dental implant, which is a surgical component that is used to interface with the jawbone as a support for a dental prosthesis, such as a dental bridge, dental crown, or denture. Dental implants provide the best alternative to replacement of several teeth or even a whole set of teeth. Using DSD technology, patients are able to visualize what their smile will look like after the dental implant procedure has been completed.

And finally, they also offer Invisalign, which are custom clear aligners that are used to fix crooked teeth, overbite, crossbite, underbite, and open bite. The Invisalign procedure begins with a scan of the patient?s teeth and then the dentist designs the aligners using 3D software and then the custom aligners are 3D printed. A series of aligners are worn for a span of six to 18 months, gradually shifting the position of the teeth.

Connolly Dental Boutique was founded by Dr. Lily Taheri, who is also the dental practice?s Principal Dentist. They offer various services, such as: digital smile design, teeth whitening, Invisalign, cosmetic dentistry, dental implant, dental veneers, check ups and cleaning, and dermal / facial injectables.
