

ABC Damage Restoration Briefs Springfield, MO Residents On Different Types Of Water Damage

January 27, 2022

Kansas City, MO - January 27, 2022 - PRESSADVANTAGE -

Republic, Missouri-based ABC Damage Restoration is reaching out to the wider community to share insight on the types of water damage they may experience in their home. ABC Damage Restoration has established itself as one of the most reliable restoration providers in Missouri for over 10 years and serves a large area of residential and commercial properties in all of Springfield, Branson, Battlefield, Republic, Nixa, Ozark, Highlandville, and the surrounding communities. More information about the company's services can be found at the following link: [Water Damage Restoration Springfield MO](#).

Tina Benton of ABC Damage Restoration says, "If your home experiences water damage, no matter what the cause of it is, you need to make sure that you act fast so that you can protect your home and yourself. The longer water damage is left untreated, the worse the effects will be. However, while most restoration companies will take a "one size fits all" approach to every case, the truth is that there are different types of water damage, and they all have to be dealt with in a specific manner."

According to ABC Damage Restoration, there are three main types of water damage, as designated by the IICRC (the Institute of Inspection, Cleaning and Restoration Certification). They are clean water damage, gray water damage, and black water damage.

Clean water damage is considered to be Category 1, meaning it is the least severe on the IICRC scale. This includes water damage that has been caused by burst pipes and water supply lines, overflowing sinks and bathtubs, and various appliance issues. The key reason as to why this type of damage is considered the least severe is because the water involved is mostly free of sewage materials and toxins. ABC Damage Restoration explains that more often than not, most items damaged due to this type of water damage can be dried easily without any need for concern.

Higher on the scale is damage that has been caused by gray water. This includes water from appliances like toilets, washing machines, and sump pump backups. While these are not 100% harmful, they can be potentially problematic, which makes it important that any and all affected items are removed, following which the area must be completely disinfected.

The most severe type of water damage, Category 3, is black water damage. ABC Damage Restoration emphasizes that in such cases, swift action is required to ensure that the residents of the property do not suffer long-term health effects. Sewage, rising floodwaters, seawater, river, and groundwater are all considered to be black water. If a property is affected by black water damage, the water damage restoration will require the removal of many items and a thorough disinfection procedure.

No matter what kind of water damage a Missouri resident is dealing with, ABC Damage Restoration and their team of experts are always ready to help. They provide a 24/7 service and guarantee that they will reach the premises within an hour and start the restoration procedures immediately. Benton says, "Few restoration companies in Missouri can match the work and service quality that we provide. When you work with us, you can rest assured that you are treating your property to the best service."

The services provided by ABC Damage Restoration have earned the company praise from their clients. Shannon W. writes in their review, "John came out and looked at our crawl space, where he confirmed our suspicions of mold. He had a crew out the very next day who began removing the mold. He did a good job explaining the process, and his crew was very respectful and thorough. I will now recommend ABC to all my family and friends!"

Those who want to learn more about ABC Damage Restoration's water damage restoration services in Springfield MO or any of their other services should visit the company's website. Interested parties are
