

Atlantic Coastal Welding Supplies High Quality Angler Gas Tanks

January 26, 2022

January 26, 2022 - PRESSADVANTAGE -

Atlantic Coastal Welding, a New Jersey based welding company and the home of Speedy Tanks, would like to reach out to local customers who may be in search of boat tanks that meet the new standards laid out by the EPA. Their aluminum gas tanks are made using high quality materials produced in the United States of America, which means buyers can be sure of their high quality. The company has been fabricating tanks during the COVID-19 pandemic, and this means that service has gone virtually uninterrupted. Similarly, their quality has remained uncompromised over the past two years.

The New Jersey fabricator uses advanced yet easy methods of design and fabrication to produce custom made tanks for every customer. As the company says, this represents, "The easy way to design and build a tank just for you! We provide superior quality custom-made aluminum, steel and stainless steel tanks, all of which are epoxy-coated. This salt water and chemical resistant coating is included in the fabrication process at no extra charge. Additionally, all of our tanks come with an identification sticker which includes serial number, date of manufacture, pressure testing results, volume measured in gallons, materials used and associated material grade, as well as our manufacturing information for your reference."

With over 40 years' worth of experience in building, replacing and repairing boat gas tanks for a wide range of manufacturers, Atlantic Coastal Welding has built a great reputation for being one of the top companies in their field. Some of the manufacturers they have worked for include Grady White, Mako, Boston, Whaler and more. They offer a five day turnaround on all tanks and offer a rush delivery service for clients who want their tanks produced faster. They are also equipped to offer installation with all the appropriate paraphernalia, including neoprene, fuel senders and gauges and a wide selection of hoses and clamps.

"Atlantic Coastal Welding came through with a replacement diesel tank - they saved my entire sailing season," says a 5-Star review from one customer. "Working with Trish and John was quick and easy by phone and email, and my custom spec tank was ready in about two weeks! In addition, they had all the fittings needed to install the tank and get my boat back on the water. Thank you, Atlantic Coastal Welding!"

The company offers other welding and fabrication-related services. They provide complete metal fabrication and repair work, including on-location services, along with a full line of machine shop services (such as shearing, bending and forming; plate rolling; and punching capacity). At Atlantic Coastal Welding, they pride themselves on offering quality workmanship and the ability to fabricate and repair almost anything. They are well known in New Jersey for their excellent services and consistently high quality results.

Recently, Atlantic Coastal Welding started offering water jet cutting services, and they were excited to introduce their new Omax Water Jet Cutting Machine. This machine is capable of cutting almost any material, from granite and quartz to wood, steel, aluminum and more. The machine can effortlessly displace 6" of steel with ease and can be used to cut any design, logo, pattern or drawing within 5 to 7 working days. With speed and quality being the goal with every fabrication job, customers can be sure to get excellent results out of Atlantic Coastal Welding.

Many customers approach Atlantic Coastal Welding for assistance in a variety of fields, and a crucial part of the company's responsibility is to deliver on multiple services at once even when they are part of the same project. According to one customer's grateful review, this is always the case. They affirm, "Hands down, they are the best around. They are extremely accommodating to meet any of your needs, whether it's rod holders, fuel tanks, custom water jetting or welding needs. Their team has never let us down."

For more information on the many services available at Atlantic Coastal Welding (along with more information on Bertram Gas Tanks), visit Atlantic Coastal Welding's website. The company is dedicated to providing excellent fabrication and welding services in New Jersey, and all of Atlantic Coastal Welding's customers trust their team to produce great results.
