

Medical Gas Installers Available for Dallas Fort Worth Area for Hospitals and Other Health Care Facilities

February 07, 2022

WATAUGA, TX - February 07, 2022 -
North Texas Plumbing, a company based in Watauga, TX, is happy to inform everyone that medical gas installers or medical gas plumbers are available for hospitals and other health care facilities in the Dallas Fort Worth Area. They provide a commercial plumber service that specializes in medical gas installation plumbing services for both renovation and new construction of hospitals, surgery centers, dental facilities, veterinary clinics and surgical offices, emergency rooms and all other kinds of medical gas pipe applications. North Texas Plumbing is fully insured and licensed for medical gas projects. They can custom engineer the proper medical gas system for a specific facility and will take care of everything, from design to completion.

Marc Sims, owner of North Texas Plumbing, says, ?Medical gas installers are specialist plumbers trained and certified in installing medical gas pipe systems. Our medical gas installers are specifically certified by the State of Texas as installers for medical gas. Only licensed medical gas installation plumbers should install medical gas pipeline systems. We specialize in medical gas pipe installation for new construction as well as renovations and repairs.?

The medical gas systems in hospitals and other health care facilities are designed to supply certain gases and gas mixtures to different places in the hospital or building. These gases that are often used in a medical setting include: nitrous oxide; oxygen; medical air; medical vacuum; nitrogen; carbon dioxide; and waste anesthetic gas disposal. The medical gas plumber will ensure that zone valves and emergency shut-off valves are available in order to stop the flow of the gas in a particular location in the even that there is a significant leak or there is a fire, and also for servicing. Valves may be provided at the entrance to departments, with access offered through emergency pull-out windows.

These medical gas pipe installers can cater to the needs of: hospitals, health care facilities, emergency rooms, medical offices, veterinary surgical centers, operating rooms, and veterinary offices. They can install various kinds of gas piping for medical use. These include: oxygen pipe welding; oxygen piping; nitrous oxide piping; medical vacuum installation; medical gas manifold installation; medical air compressor installation; take-offs & engineering; medical gas outlet, alarm, zone valve installation; and more.

Meanwhile, all medical gas pipes need to comply with the National Fire Protection Association (NFPA) 99 standards for positive pressure medical gas plumbing. The medical pipes are for delivering various kinds of medical grade gases from a utility room where the gases are kept in tanks to different locations in the medical or health care facility, such as an emergency room, a hospital, or a surgical center. The fire safety standard specifies the criteria for different levels of health care systems based on the risk to patients, staff and visitors, in order to minimize the risk of of fires, explosions, and electrical accidents. Therefore, the workers who will be providing the installation of the medical gas plumbing system, the piped vacuum systems, and the supporting parts for outlets, zone valves, manifolds, and alarms, will have to be a certified ASSE 6010 installer. The commercial gas plumbers will also have to be well-versed in different oxygen storage methods, such as high-pressure oxygen tanks, chemical compounds, and cryogenics.

Founded in 2013, North Texas Plumbing is a provider of commercial plumbing services for businesses in the Forth Worth - Dallas - DFW Metroplex - North Texas. They specialize in medical gas plumbing; drain line repiping; grease trap installation; tankless water heater installation; water line rerouting; water main repair and replacement; water jet pipe cleaning; drain cleaning; foundation leaks and slab leak repair; sewer line repair and replacement; gas line repair; gas line installation; and more.
