

Meriden Podiatrist Central Connecticut Footcare Center Is Offering Treatment For Plantars Warts

May 04, 2022

May 04, 2022 - PRESSADVANTAGE -

Central Connecticut Footcare Center LLC is offering the latest innovation in podiatry, the Saorsa Swift Microwave Treatment, to its patients in Meriden, CT. Readers can find out more about the podiatrist clinic by heading over to its website at the link: <https://www.centralctfootcare.com/>.

Plantar warts are scaly growths of tissue that form on the load-bearing parts of the foot amongst those who are suffering from viral infections, specifically HPV (the Human Papilloma Virus). Plantar warts can develop into calluses and lesions that are rough to touch and have a propensity to cut or bleed. Plantar warts usually dissipate after some time but they can be a nuisance for those who insist on being in top physical shape all the time and for whom being free of pain and discomfort is non-negotiable.

A spokesperson for Central Connecticut Footcare Center educates readers on the techniques available to cure plantar warts by saying, "There are a few options that you can try. First is over-the-counter medications. However, these take a long time to work and may not be fully effective depending on the extent of the

infection. Cryotherapy is another popular method of getting rid of them. In cryotherapy, liquid nitrogen is used to cause a blister to form around the wart. The dead tissue then sheds off in as little as a week. However, it may require local anesthesia. Cryotherapy is also known to damage areas surrounding the infected growth, causing undue discomfort. Thankfully, Central Connecticut Footcare Center has now switched to the use of the revolutionary Saorsa Swift Microwave Treatment System that is the perfect solution for cleanly getting rid of plantar warts without pain and without requiring anesthesia.?

The Swift System is a surface-based device intended for the coagulation of soft tissue during non-invasive procedures. The Swift generator is a unique and compact design with a simple user interface that allows for a quick treatment setup. It produces microwaves that deliver a precise, highly controlled energy dose into the skin. Microwaves are a form of non-ionizing radiation, which means that they can't cause damage to the DNA of living things making their use in treatments extremely safe. Unlike cryotherapy, salicylic acid, or laser ablation, the microwaves travel to a pre-determined depth and don't break the surface of the skin beyond the point of application. The result is a fast, pain-free treatment that does not require anesthesia and also does not require any dressing of the foot post the procedure. The microwave therapy also does not produce any smoke, plume, or smells.

Central Connecticut Footcare Center also provides a range of other services and treatment for conditions such as Aetrex, ankle sprains, athlete's foot, bunions, custom orthotics, diabetic foot, Dr. Comfort diabetic footwear, corns, flat feet, Haglund's deformity, hammertoes, heel spurs, ingrown toenail, KeryFlex®, Morton's neuroma, plantar fasciitis, Quadrastep® System®, stress fracture, tendonitis, and toenail fungus.

The head of Central Connecticut Footcare Center, Dr. Tina A. Boucher, graduated from McGill University in Montreal, Canada with a Bachelor of Science in Psychology and Pre-Med. She received her Doctor of Podiatric Medicine from Temple University in Philadelphia in 2002. During her three-year advanced (Podiatric Medicine and Surgery - 36 months) residency at Benedictine Hospital in Kingston, NY, Dr. Boucher successfully performed more than 900 foot and ankle procedures. She then served as the chief surgical resident there for two years. Dr. Boucher is also certified in ankle arthroscopy techniques. She is licensed to perform podiatric medicine and surgery in Connecticut. Dr. Boucher is affiliated with MidState Medical Center in Meriden, CT, and The Hospital of Central Connecticut in Southington and New Britain, CT. She has lectured on foot and ankle pathologies and is dedicated to learning through various continuing education seminars and journals.
