

Crypto Trading Bot Is The Key To Generate Passive Income With Cryptocurrencies

May 14, 2022

May 14, 2022 - PRESSADVANTAGE -

Accomplished internet marketing and crypto investment expert has created a new crypto trading strategy that uses a robot to generate passive income for the user.

In March 2022, the rate of inflation in the United States hit 8.5%, the highest that it had been since 1981. Rising oil prices which were exacerbated by the war that Russia is waging in Ukraine, are one of the primary reasons for the runaway inflation. There is also an increase in the prices of consumer items due to labor shortages and supply chain disruptions all over the world ? both resulting from the aftermath of the COVID-19 pandemic, which is on the decline but expected to cause more hospitalizations and deaths come fall. The Federal Reserve responded to the runaway inflation in early May 2022 by hiking the interest rate by half a percentage point, its biggest hike in over two decades. This followed closely on the heels of another rate increase of a quarter percentage point in March 2022. More such rate hikes are expected when the Fed meets again in June and then again in July.

The expert explains the effect of inflation on people?s savings and investments by saying, ?There are a lot of factors beyond one?s control that are responsible for the rampant increase in the prices of goods nationally

and internationally. Living is getting more expensive day by day and just relying on one's income to sustain oneself is a fool's errand in these uncertain times. The way I like to imagine it is that you are trying to survive on a boat in turbulent waters. You can do your best to row towards the piece of land that you've spotted in the distance, but your boat is built flimsily and right now there is a gaping hole in the middle that is sinking you despite your best efforts to stay afloat. This is the effect of inflation on your savings. Keeping your money in the bank where you get paltry interest rates is not enough to grow your money at the rate that is needed to preserve its purchasing power. To secure a future for yourself and your family, you have to invest and you have to invest smartly. There is just no debating this. However, investing is a time-intensive process that requires dedicated study of whatever asset class you choose to target – whether it be stocks, real estate, or non-traditional assets such as the one I am most interested in – crypto. I've worked hard for several years now to come up with an investment strategy that not only eschews the effort required to understand the intricacies of the crypto market but has also proven to be extremely successful for the students with whom I've shared it. Come watch the latest webinar to find out more about my crypto-bot trading strategy and to unlock the potential for generating a truly passive income to keep up with the rising inflation and to survive the ups and downs of the economy.?

The new crypto-bot trading strategy works 24 hours a day, 7 days a week, 365 days a year, finding opportunities in the crypto market and then capitalizing on them quickly, without the user's input, to secure them a profit. The strategy is resistant to the volatility of the market and it can work effectively whether the market goes up, down, or sideways. As a beta test, the system was shared with 18 students from all over the world who have reported making thousands to tens of thousands of dollars per month. The system is newbie-friendly, takes 15 minutes to set up, and users can make as much as 7% per month with this crypto trading bot strategy.
