

New Plantar Wart Treatment Available In San Antonio

June 27, 2022

June 27, 2022 - PRESSADVANTAGE -

San Antonio, TX based Medical Center Podiatry, PLLC is pleased to announce that the Swift treatment for plantar warts will be offered to patients from now on. Recommended by podiatrists across the nation, the implementation of the Swift system offers both the clinic and their patients a host of benefits. See more about Swift and the clinic's other services here: [Here Is A Full List Of Our Services](#).

The Saorsa Swift Microwave Wart Treatment is designed to treat warts, and patients will likely find that they prefer it much more than the alternatives. Previously, podiatrists may have suggested a number of options, each with their own drawbacks, that were designed to provide relief from plantar warts. These options may include the application of topical solutions (such as salicylic acid), burning, cryotherapy, laser therapy and even surgical removal. Some of these methods were significantly more aggressive than others, though patients in this position often had little choice if they wanted to get rid of particularly stubborn warts.

However, this issue is now a fixture of the past thanks to Swift. Utilizing microwave energy, the Swift machine can be used to target the wart itself on the sole of the foot, and there is virtually no risk of damage being done to the surrounding tissue, as might be the case with burning or freezing methods.

One of the most notable advantages offered by Swift is the fact that it can be implemented very quickly, allowing patients to enjoy the convenience of a short visit and enabling Medical Center Podiatry to help many more in their community during a given day. However, the clinic encourages their patients to look into the subject further on their own if they are still skeptical.

Need help doing the research? Click here and let us help you, says Medical Center Podiatry. All the information you could want about Swift and the other ways we help our patients can be found on our website. Even if you want to look at a number of sources before you decide to come to us, the information shared here can help you identify what medical terms to look for as you browse the web. It's a good place to start. Of course, we also welcome any inquiries you may wish to send our team directly. Our helpline is always open, and you can schedule a consultation via the website as well.

Patients who have come in previously for plantar wart treatment will know that most treatments require multiple sessions to complete. Depending on the size of the wart in question, this can be true of Swift as well, but the crucial difference is that it only takes 5-10 minutes per session. Furthermore, there is little to no downtime or recovery, and patients are generally able to go about their day as they normally would. Medical Center Podiatry also highlights the fact that Swift is virtually painless; some patients report feeling no more than a scratch at the site being treated.

Dr. Cauthon explains that this is due to the technology's ability to avoid penetrating through the surface of the skin. While the method is known for being both safe and hygienic, many patients will also appreciate the fact that it leaves no trace of scarring. The sole of their foot will look perfectly normal once treatment is complete.

Medical Center Podiatry adds that the device is designed to function only if a new, unused applicator tip is attached, preventing cross-contamination between patients. This tip is disposable, making it easier for the clinic to take care of their patients. Furthermore, little is needed in the way of post-procedural padding or dressing.

Dr. Cauthon says, Give us a call today, we look forward to hearing from you! Our lines are always open, and our team looks forward to explaining how Swift can improve your plantar wart treatment at Medical Center Podiatry.

Medical Center Podiatry is a full-service podiatry practice that focuses on comprehensive foot and ankle care. Every patient in their community is welcome, including children and adults from all walks of life.
