

FLEET COST & CARE

Fleet Management Consultants Provide Fleet Management Software

May 23, 2022

DETROIT, MI - May 23, 2022 - PRESSADVANTAGE -

Fleet Cost & Care, a company of fleet management consultants based in Detroit, MI, is happy to announce that they are offering fleet management software that can be used by any size company who want to streamline quotes, maintenance, scheduling, accounting, and more. They provide the only extensive fleet operations system available and is therefore not just a dispatching tool. They offer the NexGen desktop fleet management software, which is for fleet owners to help heavy equipment rental companies have a more efficient operation. They also provide the Atom mobile app for fleet management that allows the user to boost productivity by efficiently managing a fleet using any computing device from anywhere.

Jeff Curran, President of Fleet Cost & Care, says, "When sales teams are effective and efficient, it brings success across your entire organization. Learn how your sales team will benefit from NexGen and Atom fleet management software. Empower your sales team with a centralized system and mobile app that will increase their efficiency and enable them to quickly quote customers from anywhere, to make informed decisions based on insights to past sales and see real-time resource availability."

The fleet management software available from Fleet Cost & Care offers several advantages, such as:

elimination of standalone systems; easy to use and proven mobile solution; comprehensive reporting and forecasting; and collaboration with a team of industry experts. With NexGen and Atom, users can eliminate the need for standalone systems, which saves a lot of time, enhances data accuracy, and boosts profit margins. Simplification of the work results into higher productivity across all departments in an organization.

Meanwhile, Atom is a comprehensive mobile fleet management app that enables fleet owners to manage their operations using a smartphone or tablet. Sales managers, operators, dispatchers, and service managers can use Atom to: assign work to mechanics, enter labor, create quotes and work orders, perform safety checklists, check in on the status of the jobs for any given time period, and capture signatures on a job site.

All of the work performed in the Atom app is synced in real-time with NexGen. Thus, data on the work being done in the field can immediately be accessed by administrative staff in the office. Payroll is one of the main areas where Atom enhances efficiency by minimizing the need to re-key information from one system to the next. Atom greatly reduces the need for paper.

The Atom mobile app from Fleet Cost & Care can be used to assign vital tasks to particular vehicles that being used in time-sensitive projects. For example, construction projects often need a wide range of light and heavy vehicles, with each one doing various jobs. By assigning tasks to drivers in real time, the construction managers can ensure that each project will efficiently be done. Assigning tasks to vehicles can be a complex job, particularly if the company is has multiple construction projects in different areas in the same day. Ensuring that every vehicle is at the correct location is essential.

Founded in 1993, Fleet Cost & Care was established by the owners of the JJ Curran Crane Company when they decided to branch out into fleet software technology. Jeff Curran's goal of founding Fleet Cost & Care was to develop a centralized software solution to boost revenue and decrease costs for fleet owners everywhere. After careful research and collaboration with a team of first-class developers, Fleet Cost & Care (FCC) became a reality. FCC introduced its first fleet management system in 1996 with features such as preventative maintenance, scheduling, and invoicing. They continued with the development of the software resulting into more functions and reporting capability. In 2007, the second generation of FCC's software hit the market, which is currently now known as NexGen. And after the release of NexGen, the company went on to develop a mobile application, which is known as Atom.

Those who are interested in learning more about the fleet sales software available from Fleet Cost & Care can check out their website, or contact them on the phone or through email.
