

Dr. Theo Spyrakis From Bexley Dental Is Educating Patients On The Topic - What Is All On 4

June 08, 2022

June 08, 2022 - PRESSADVANTAGE -

Dr. Theo Spyrakis, an expert in implant and restorative dentistry from Sydney, is educating New South Wales residents about the advantages offered by the All-On-4 dental procedure, an advanced minimally invasive technique for implanting teeth.

Dr. Theo offers his services at Bexley Dental, a dental clinic that has been serving the Bexley community since 1990. Dr. Theo mastered the All-On-4 dentistry procedure by traveling all around the world and even training under Dr. Paolo Malo of the Malo Clinic in Portugal, the inventor of the revolutionary dental procedure. Today, Dr. Theo performs over 550 implant procedures every year. He is now using his platform to raise awareness about the many benefits of the All-On-4 procedure which has a demonstrably high success rate and produces objectively beautiful results.

With the All-On-4 procedure, the upper or lower set of teeth is replaced with just four implants. These four implants act as a support mechanism for the placement of a new set of fixed teeth. The implants are made from titanium metal which is known for its strength and compatibility with human biology. Once the implants are installed the patient has a choice between three separate tiers of teeth namely Basic, Premium, and Titanium Deluxe.

The All-On-4 procedure is particularly appealing because it makes rehabilitation possible for patients who might not have the sufficient bone structure to support conventional dental implants which require 6 to 8 implants to support a full fixed bridge. The All-On-4 technique doesn't require the same density of bone to secure the implant making a full arch rehabilitation possible for this select group of patients who would be out of luck if they relied on conventional dental implant techniques. The All-On-4 procedure succeeds where conventional dental implant procedures fail because the posterior implants are tilted 45° towards the rear of the mouth and placed into the anterior maxilla, a region of the jaw with higher bone density.

Another reason why the All-On-4 procedure is a lifesaver for some patients is that it is the ideal solution for those suffering from osteoporosis, a bone disease characterized by low bone mineral density, low bone mass, or poor bone structure. Patients with osteoporosis who are also suffering from dental issues may have the perception that they can't get their teeth rehabilitated due to their poor-quality bones. While this is true for conventional dental implants, All-On-4 eliminates the need for bone grafting, which means patients suffering from osteoporosis can also reap its benefits.

Dr. Theo Spyrakis talks more about how the All-On-4 procedure can give those suffering from poor dental health a new lease on life by saying, "Not everyone is blessed with immaculate dental health. Moreover, calcium and vitamin D deficiencies can also lead to conditions like osteoporosis that make restoring one's teeth a significant challenge. Thankfully, the genius application of the All-On-4 procedure sidesteps all of that and we have at our disposal a dentistry solution that can help those with even the most unconventional and weakened bone structure get back the perfect use of their teeth. There is no reason to go for conventional dental implants anymore. The results from the All-On-4 procedure are longer-lasting and more accurately recreate one's natural teeth. The results are not only more convincing but you will also get a brand new set of permanent replacement teeth in just 24 hours as opposed to the 3 to 4 month wait time that conventional implants often require. If you are interested in finding out more about how the All-On-4 procedure can dramatically improve your personal as well as professional life, give Bexley Dental a call. We will walk you through the details and get you started on the path to full restoration of your dental health."

Readers from Sydney who want to benefit from the All-On-4 procedure offered by Bexley Dental can contact the dental clinic at the phone number (02) 9567 4151. The clinic is located at 400 Forest Rd, Bexley NSW 2207.
