

Toronto Functional Medicine Centre Looks at Whether It Is Possible to Fight Inflammation with Glutathione IV Therapy

July 01, 2022

TORONTO, ON - July 01, 2022 - PRESSADVANTAGE -

Toronto Functional Medicine Centre in Toronto, ON, Canada, has recently published a blog post that examines whether it is possible to fight inflammation with glutathione IV therapy. Fighting inflammation is vital because severe inflammation can trigger body stress, such as swelling, pain, discomforts, skin problems like psoriasis, and chronic fatigue. Meanwhile, functional medicine practitioners typically employ glutathione IV therapy to reduce oxidative stress, which may be the root cause of chronic inflammation.

Glutathione intravenous therapy has been noted to promote several anti-inflammatory beneficial effects. These include: the management of autoimmune disorders by protecting the body from oxidative stress that may trigger inflammation by supporting the detoxification of xenobiotics; and the possibility of helping with decreasing gut inflammation; the possibility of helping alleviate symptoms of liver damage, including inflammation; and possible reduction of inflammation that can affect brain health.

Toronto Functional Medicine Centre provides personalized treatments that include IV therapy drips. And every therapy drip that is provided by their vitamin IV lounge is freshly compounded daily to help promote cell health, brain function, blood cell production, and hydration. Glutathione IV drips may help in promoting detoxification, decreasing inflammation and reducing the damages to cellular functioning. In this method, therapeutic doses of glutathione are provided through an IV drip solution that is delivered through the veins. This has the advantage of immediately becoming available for the body to use because it directly enters the bloodstream of the patient and does not have to pass through the digestive tract. In addition, IV glutathione is suitable for those who have dysphagia or don't want to swallow pills.

Those who are interested in glutathione IV therapy will need to undergo an initial consultation of about 30 to 45 minutes at the Toronto Functional Medicine Centre. This is to make sure that glutathione is appropriate for the specific patient's health goals and to ensure that the patient doesn't have allergies related to the solution. They want to emphasize that because their approach is based on integrative functional medicine, they will always treat every patient as a unique individual with unique needs. And depending on these specific needs, testing and other functional medicine treatments may be suggested for nutritional deficiencies, hormonal health, physical performance, mental performance, and more.

The IV therapy drips they provide may be helpful in boosting energy, correcting deficiencies, and providing essential nutrients for the body. They offer a wide range of IV vitamin drip treatments, such as: high-dose vitamin C drip; high dose glutathione; nicotinamide adenine dinucleotide (NAD), vitamin A, vitamin E, and other important ingredients like the mistletoe extract that may help in attaining optimal health. Nutritional IV therapy may be suitable for those: who have compromised digestive systems; who are averse to oral supplements; who want to rehydrate and strengthen the immune system; who want to increase their energy levels; who want to detoxify the liver and kidneys; who want relief from inflammation, lethargy, sports injuries, and pain; and who need adjunctive support in their health care.

The Toronto Functional Medicine Centre applies an integrative functional medicine approach, where they use functional medicine methods in combination with restorative medicine, such as naturopathic medicine, traditional Chinese medicine (TCM) or Eastern medicine, herbal medicine, bio-identical hormone replacement, allopathic medicine and more. They use integrative functional medicine therapies for different kinds of health conditions, such as: neuropathic pain, chronic disease, hormone imbalances, postmenopausal health issues, acute health issues, and more. The health conditions that they may be able to assist with include: cellular damage, chronic fatigue, tissue repair, mineral deficiencies, DNA repair, athletic recovery, immune function, thyroid conditions, infertility, adrenal function, skin rejuvenation, and others. This private Toronto clinic employs a patient-centered approach to wellness. Their functional medicine programs can be adapted for both acute and chronic care.

People who would like to know more about the IV therapy services in Toronto, such as IV therapy with mistletoe extract, can go to the Toronto Functional Medicine Centre website, or contact them through the phone: (416) 968-6961 or via email at info@tfm.care.
