

# Introducing the Method Seven Pilot Clip-On FX: Classic Aviator Style, Modern Technology

*July 08, 2022*

Santa Cruz, California - July 08, 2022 - PRESSADVANTAGE -

Santa Cruz, CA based Method Seven is pleased to introduce new non-polarized clip-on aviators to an already enthusiastic customer base of aviation professionals and eyewear aficionados. Known as the Method Seven Pilot Clip-On FX, the new product features classic aviator style while boasting several examples of modern technology. Customers need only visit Method Seven's website to browse an inventory of diverse offerings and place an order for the glasses that best suit their needs. The company provides free domestic shipping with international shipping available for a fee.

Since its inception, Method Seven's Pilot sunglasses line has offered leading-edge prescription eyewear for pilots. However, a clip-on option was noticeably missing. Whether desired simply for convenience in the cockpit or a price effective solution to accommodate more complicated prescription needs (such as trifocals), pilots have long requested a clip-on option appropriate for aviation. With this in mind, Method Seven has recently released a non-polarized Aviator-style clip to the delight of many pilots. The clip-on fits over most larger lens eyewear and is ideal for use in the cockpit during flight.

"The new Pilot Clip-On FX isn't your everyday clip-on," states founder, James Cox. "Method Seven FX lens technology, designed in conjunction with Carl Zeiss labs, offers unparalleled glare reduction without polarization. In addition to UV and infrared protection, the Pilot clip-on FX also features tried and true notch filtering that allows you to transition seamlessly between looking inside and outside of the cockpit in a variety of conditions."

Verified customer Randy C. has shared advice for any other pilots who may be considering the Pilot Clip-On FX. In Randy's review, a glowing endorsement for the clip-ons, he comments, "The lenses are so clean on these and look great. The quality is good for clip-ons. If it's available go for the prescriptions!"

According to the company, the Pilot Clip-On FX is constructed of lightweight, shatter resistant polymers. Its

innovative, yet subtle design allows it to gently attach to prescription glasses with spring loaded, rubber-coated clips. The Method Seven Pilot Clip-On FX is a convenient and versatile answer to the customer's short term prescription needs. Method Seven is pleased to share that it is already available online. Later this summer, it will also be made available at EAA AirVenture in Oshkosh, WI.

Through the launch of the new Pilot Clip-On FX, Method Seven has proven that the company will always go above and beyond when it comes to customer feedback, especially requests from within the aviation community. Professionals whose industries would benefit by having access to eyewear engineered specifically for their needs are encouraged to direct suggestions to the company as well.
