Grease Trap Installers North Texas Plumbing Is Offering Concrete And Polyethylene Grease Interceptors

July 11, 2022

WATAUGA, TX - July 11, 2022 -
North Texas Plumbing is a commercial plumbing service provider that specializes in grease trap installation, maintenance, and repair. The company offers its services in Dallas, Fort Worth, and the entire North Texas region.

Grease traps or grease interceptors are used in homes and commercial establishments to trap grease and solids before they escape into the external plumbing that connects to the city?s drainage. They are of great use in the food service industry as restaurant waste is filled with oils and greases that can clog pipes and lead to an expensive recurring plumbing expense. The term used in the plumbing industry to describe the potentially harmful sludge, that can not only block pipes but also damage the environment if it reaches water bodies, is FOG (fats, oils, and grease). A grease trap is the most cost-effective solution for trapping FOG.

A spokesperson for North Texas Plumbing talks about its grease trap installation and repair services by

saying, ?FOG is one of the primary reasons for plumbing problems in the food service industry. If you own or oversee a restaurant, bar, café, coffee shop, or dining hall you will undoubtedly be aware of how expensive the yearly plumbing maintenance costs can get. Apart from the cost of regular maintenance, a poorly maintained kitchen may also have to shut down at any time due to a plumbing emergency. So, on top of the money that you are going to spend fixing your plumbing problems, you will also have to contend with income that you lose during downtime. Thankfully, a grease interceptor is very capable of trapping FOG. It is also an economical solution as there are several options for you to choose from based on materials and features. Here at North Texas Plumbing, we use our years of experience to recommend plumbing solutions that are tailor-made for your property, depending on the size and scope of your operations. The grease interceptors that we choose are created by some of the most reputed manufacturers in the country. We are confident that they will save you money and last you a lifetime. Call us today so that we can help you eliminate your concerns about FOG and get your commercial property up to your city?s code.?

The North Texas grease trap plumber offers two types of grease interceptors to its customers in Texas ? polyethylene, and concrete. It offers performance-rated, rugged, polyethylene tanks from Schier, a company based in Shawnee, KS, that specializes in grease traps. Schier says that it manufactures its tanks wholly in the United States. It also offers a lifetime guarantee on its products. One of Schier?s most popular products is the 100/200 GPM Great Basin? Indoor/Outdoor High Capacity Grease Interceptor which offers the best-in-class certified grease capacity, has a 25% kitchen solids waste capacity, requires no flow control, is the first in the industry certified to Type D of the ASME standard, has a Safety Star® access restrictor that prevents accidental entry, fits through 36? doorways, has cast H-20 rated iron covers for outdoor installations, has traffic load rated composite covers for indoor installations, uses FCR2 field cut riser system for below-grade installations, and uses CA2 adapter for below-grade installations using 24? corrugated pipe risers.

The North Texas grease interceptor plumber also offers concrete grease interceptors from PRECON Environmental Products, LLC, an industry leader in pre-engineered environmental products. The company is based in Azle, Texas, and has 25 years of experience manufacturing grease traps. The company?s products are often furnished to meet specific engineering requirements and have special features and arrangements. The company says that handling and installation procedures may vary slightly depending upon the actual type of construction. PRECON Environmental Products, LLC, also assures customers on its website that it makes modifications necessary to comply with local codes, jurisdictions, and interpretations if it is notified before actual fabrication or upon order placement.

North Texas Plumbing can be contacted at the phone number (817) 371-0709 or the email address contact@dallasfortworthplumbing.com.
