

Coder Camps, The Nation's Premier Programming School, Announces The Opening Of Its Newest Campus In Dallas, TX

November 12, 2015

November 12, 2015 - PRESSADVANTAGE -

Coder Camp has recently announced the opening of their new campus, based in Dallas, TX. The announcement of the new location is the latest in a series of major growth initiatives for the progressive software development school. The first "troop" will begin on December 28, 2015 and the primary programming language being taught at the Dallas campus will be a fully immersive Full Stack Java course by software programming veteran Michael Deskis. Mr. Deskis has over thirty-five years of programming and educational experience. Mr. Deskis said, "I am looking forward to teaching one of if not the most important programming languages to students here in Dallas."

Dallas was chosen as the newest location due to the city's dynamic tech industry, home to many of the nation's Fortune 1000 companies and also a hub for progressive small businesses with a firm grasp on the needs for professional programming individuals. Coder Camps prepares students for the real-world environment by administering an in-depth course in a boot camp time period of only nine weeks. The Java class is designed to teach students who qualify for camp the fundamentals and necessary components of the critical programming language.

“When you are able to deliver a program like our Full Stack Java course in one of the most prolific American cities like Dallas, you can’t help but be extremely proud of everyone involved with making this a reality,” said Coder Camps Executive Vice President Chris Lipari.

The Dallas region is becoming a hub for computer and software programmers as well as app and Web developers. With North Texas’ lower cost of living, a rich pool of potential corporate clients and a growing economy, businesses and employees are finding job opportunities or moving here. The Bureau Of Labor Statistics shows an increase in job opportunities and wages for software developers that continues to grow.

Demand Is High For Java Programmers

Java as a language supports the vast majority of applications in large and medium-sized corporations. With the abundance of tech jobs available and the low number of professional programmers ready to fill those jobs, developmental boot camps are quickly becoming the resource companies are using to acquire junior to mid-level developers. “Students will receive an in-depth curriculum that provides real-world experiences leading to very well prepared graduates with a sound understanding of Java,” said Mr. Deskis.

Coder Camps is a top coding and development school with locations in Dallas, TX, Houston, TX, San Francisco, CA, and Seattle, WA. Students learn coding from scratch, and are welcomed without any prior coding experience.

The fresh and updated curriculum consists of an intense 12-week bootcamp-style classroom experience. Students can take classes 100% online or in the classroom, where they learn the newest technologies, such as .NET, Java, HTML, JavaScript and much more. Coder Camps boasts a 94% job placement rate and goes above and beyond to help their students find a career after graduation.
