

North Texas Plumbing Offers Grease Trap Installation and Repair in Dallas Fort Worth Area

August 04, 2022

WATAUGA, TX - August 04, 2022 - PRESSADVANTAGE -

North Texas Plumbing, a commercial plumbing company based in Watauga, TX, is happy to announce that they can provide grease trap installation and repair for restaurants and other commercial buildings in the Dallas Fort Worth area. Their grease trap plumber frequently goes to restaurants and other commercial establishments that serve food because grease traps are essential and have to be properly installed in such establishments. The grease trap or grease interceptor is needed to collect fats, oils and greases (FOG) in order to minimize the amount of FOG that enters the sewer system. If too much FOG gets into the main sewer system, over time there will be blockages, bad odors, and pest infestation, which can be an inconvenience for all buildings that use the sewer system.

It is important to note that there is a distinction between the grease trap and the grease interceptor. The grease trap is typically a smaller indoor device with a capacity of less than 100 gallons and was frequently installed, until recently, under the sink. They are often made of steel and have only a single compartment. On the other hand, the grease interceptor is generally a big pre-cast concrete tank with a capacity of 250 to 5,000 gallons and has two separate compartments. Nevertheless, North Texas Plumbing refers to both kinds of devices as grease traps.

Marc Sims, owner of North Texas Plumbing, says, ?Every restaurant owner knows grease traps are a necessity, but they are also a major headache when something goes wrong. If you are building your establishment it is important to get your grease trap installed the right way the first time so that you can get on with building your business instead of dealing with plumbing problems. That?s where our grease trap plumbing comes in. Grease traps are one of our major specialties. Getting your grease trap / grease interceptor installed or serviced by a North Texas Plumbing grease interceptor plumber will save you both time and money.?

The North Texas Plumbing grease trap plumber can install or repair all three primary types of grease traps that are available in the market. These are the: passive hydromechanical or manual grease traps, gravity grease traps, and automatic grease traps. The most commonly used type of grease trap is the passive kind, which are frequently used in smaller establishments. These are the simplest to use and are also the most affordable. These are usually installed under the sink although there are larger units for bigger establishments that can take care of bigger volumes of wastewater.

The gravity grease traps are for big restaurants and other similar commercial establishments and are usually in the form of big in-ground tanks made of steel, concrete, or fiberglass. They function in the same way as passive grease traps, except that they have a bigger capacity and are therefore useful for establishments with high flow wastewater systems. These gravity grease traps need regular maintenance to pump out the FOG that have been collected in the tank. The grease trap plumbers from North Texas Plumbing can offer such maintenance services for gravity grease traps and make sure there is minimal disruption of the operation of these commercial establishments.

Established in 2013, North Texas Plumbing is a leading provider of commercial plumbing services for a wide range businesses in the North Texas area, particularly in the Dallas-Fort Worth metroplex. They offer different types of services, including: grease trap installation; drain line repiping; water jet pipe cleaning; medical gas plumbing; foundation leaks and slab leak repair; water line rerouting; water main repair and replacement; sewer line repair and replacement; tankless water heater installation; gas line installation; drain cleaning; gas line repair; and more. The medical gas piping installation that they can provide includes: oxygen piping; nitrous oxide piping; oxygen pipe welding; medical gas manifold installation; medical air compressor installation; medical vacuum installation; alarm, zone valve installation; medical gas outlet, and take-offs and engineering.

Those who require the installation or repair of grease traps or grease interceptors can check out the North Texas Plumbing website, or contact them through the telephone or via email. They can be contacted 24 hours a day, from Sunday to Saturday.
