

DOT Drug Testing Available In Texas

August 11, 2022

August 11, 2022 -
Morton Grove, IL based InOut Labs is pleased to announce that they have begun expanding their DOT drug testing services in Texas. Given the sheer number of drivers and motor vehicles a company can employ, a fast, efficient and accurate service is of paramount importance. InOut Labs is dedicated to ensuring their clients are able to maintain compliance with US Department of Transportation (DOT) and Federal Motor Carrier Safety Administration (FMCSA) regulations for drug and alcohol testing.

InOut Labs has already been hard at work rolling out their services for clients in Dallas /Fort Worth and Houston (with great success), and the team is looking to make sure any client can access their valuable assistance no matter where they are situated within state lines. This also extends to smaller companies that may have no more than a handful of employees. Since 2018, federal regulations have required that 50% and 10% of drivers be tested for drugs and alcohol, respectively, but this is not practical in organizations with only a few drivers. As such, InOut Labs explains that Owner-Operators (or companies with 10 or fewer drivers) can register under a DOT Consortium with the company?s assistance, which effectively allows them to comply with these regulations in a practical manner.

InOut Labs offers a comprehensive, hassle-free FMCSA Consortium Registration package for this express purpose, and it includes the full suite of random drug and breath alcohol tests as well as a number of other benefits. InOut Labs clients receive DOT audit assistance and unlimited consulting when problems occur. Further, given that the company operates thousands of testing centers, clients may utilize their Lab Locator to find a center that is conveniently located for their needs.

Clients may also be interested to learn that InOut Labs offers similar support with FMCSA?s Clearinghouse (a centralized online database that contains records of DOT FMCSA drug and alcohol program violations). Signing on with this program will entitle the client to unlimited consultations for all Clearinghouse matters, sample consent forms and confidentiality agreements, violation reporting services and much more.

InOut Labs understands that many businesses, particularly smaller organizations or those new to their respective industries, will have questions regarding DOT testing compliance, FMCSA Clearinghouse and so on. They encourage their community to reach out to their team today for clarification or assistance. Since the company places a high priority on customer service, such concerns can be addressed swiftly with their representatives? help.

The standard of this service is also evident in the company?s reviews. Bob D. says, ?Great operation. Tim and his team do our pre-employment drug screening, controls the random draw, all hands off, turnkey. As an employer, if you don't drug testing, you are likely to have 2x's the national average of 10% of team members struggling with addiction.?

Susan K. similarly says, ?We recently changed our DOT/Commercial Carrier testing over to the company, and the options are vast, the pricing is fair and the service/response has been great. We were up and running in no time, and I have been extremely impressed. We will be more efficient, with more options across the country, quick results and help when needed. Happy we switched!?

InOut Labs works with a wide variety of clients, from those with a handful of drivers to those operating large fleets of vehicles with hundreds of drivers. They are always ready to help a client learn more about DOT compliance requirements and so on in addition to supplying the base testing service.
