

# SuperGreen Solutions Opens Chicago Franchise

*August 12, 2022*

Chicago, Illinois - August 12, 2022 - PRESSADVANTAGE -

SuperGreen Solutions (<https://supergreensolutions.com>) has announced the addition of their franchise location in Chicago. The addition of Chicago accounts for 17 franchise locations in the continental United States.

In spite of having large networks of public transportation in Chicago ? such as eight "L" rapid transit lines, over 120 bus routes, and over 1800 buses ? Chicago doesn't have a reputation as a Green city. However, the city of Chicago hopes the 2022 Climate Action Plan will change this perception. As outlined in the plan, Chicago is on course to reduce the city's carbon emissions by 62% by 2040.

Additionally, the 2022 CAP prioritizes delivering substantial community benefits and system improvements as the City continues to lead on climate change. It is based on values of economic inclusion and savings, pollution burden reduction, equitable access to critical infrastructure, community health, and resilience.

"To be honest, this was a perfect fit and we're proud to have a presence in Chicago," commented SuperGreen Solutions. "We also want to help contribute to the city's goal of becoming more Green. Our franchise offers a variety of services to both commercial and residential clients that can help with this."

SuperGreen Solutions was established in 2011 by Dan Dubell, a renowned sustainability consultant. One year later, SuperGreen Solutions began to franchise and pursue growth.

Since 2011, the company has grown, adding several franchise locations for SuperGreen Solutions that have been established throughout the United States. Additionally, it provides franchise locations in Canada. With their exclusive bundles of maintenance solutions, which include cutting-edge tools and energy-efficient products, SuperGreen Solutions assists franchisees in making energy-efficient options accessible.

Currently, SuperGreen Solutions several types of green products and services for both residential consumers

and businesses. Such services and products include solar panel installation and cleaning, energy-efficient lighting, wind-power products, car-charging stations, energy audits, and water conservation.

SuperGreen Solutions notes that it's not just solar that consumers can benefit from. As things like electronic vehicles become more popular, customers may benefit from SuperGreen Solutions' exclusive combination of services in adopting sustainability and minimizing the environmental impact of energy use.

One customer, Andrew H. commented, "We had a pair of Tesla chargers installed in the garage of our new-to-us house. As far as customer service goes, I don't think it gets any better than what SuperGreen provides. They are by far the friendliest company that I have ever worked with. Also, they had the chargers already in stock. This made the whole process so much easier and expeditious. We went from a quote over the phone to a completed install within a week. On the day of the appointment, the technician showed up on time, and again brought that excellent customer service. The final product setup was better than we had hoped. No mess left behind, and a clean look. I would 100% use them for any future work that I may need."

SuperGreen Solutions has plans to continue its expansion across the United States in the coming years. The company is currently looking for qualified individuals to open new franchise locations in select markets.
