

SuperGreen Solutions Provides Residential Homes Options For Sustainable Green Living

August 12, 2022

Bel Air, Maryland - August 12, 2022 - PRESSADVANTAGE -

SuperGreen Solutions (www.supergreensolutions.com) has been guiding homeowners and businesses worldwide to the right green solutions for 10 years. Founded in 2011 by Dan Dubell, a sustainability consultant, SuperGreen Solutions began franchising and expanding into multiple territories throughout the United States as well as Canada in 2012.

As the cost of solar technology decreases, many consumers are finding solar panels a more affordable option each year. According to the National Renewable Energy Laboratory (NREL), the installed cost of solar photovoltaic (PV) and battery storage systems continued to drop between 2020 and 2021 in the U.S., with utility-scale solar systems seeing a 12.3% price decline. This has led to an increase in demand for solar panel installation, as more people are looking to save money on their energy bills and become more sustainable.

SuperGreen Solutions notes that a well-designed and properly installed solar panel system will usually pay for itself over time by saving consumers money on electricity bills. In some cases, consumers may also earn money through ongoing incentive options such as net metering.

Due to the increase in consumer demand and decreased cost of installation, Dubell notes that getting into green technologies is a win-win for both the consumer as well as those interested in joining the SuperGreen Solutions team as a franchisee. "As a SuperGreen Solutions franchisee, you will be part of a company that is making a difference in the world by helping others to implement practical solutions for reducing their carbon footprint and becoming more sustainable," said Dubell.

Dubell's passion for going green can be found throughout the feedback provided by customers. John J., a solar installation customer in Florida stated, "With the cost of energy at an all-time high, why not take out the stress of out-of-control energy cost... [they] took the time to go over the whole process and was always

available to answer any concerning questions. I'm very excited to see the savings for years to come. All the thanks to super green solutions."

Looking to the future, Dubell is confident in SuperGreen Solutions' ability to provide homeowners with even more options for sustainable living. "As we continue to grow, our goal is to be able to offer our franchisees an ever-increasing array of green product and service solutions that they can offer their customers," said Dubell.

SuperGreen Solutions has positioned its brand as a green technology advisor with a comprehensive approach to "going green." SuperGreen Solutions provides a range of services that helps its customers find an easier path to sustainable living. Currently, SuperGreen Solutions' services include solar energy solutions, green building solutions, home energy solutions, commercial energy solutions, and carbon footprint reduction.

Super Green Solutions commented, "We offer free consultations to help you determine the best path forward for your home or business. Additionally, we won't walk away after installation. Going green is a journey, and we'll be there to help you succeed."

By taking a comprehensive approach and educating customers, SuperGreen Solutions aims to find the right combination of technologies for residential homes as well as businesses. This mentality has allowed SuperGreen Solutions to become a leader in the sustainable living space.
