

STEVENS Metal Building Company Offers Pre-Engineered Metal Buildings In Indiana

August 26, 2022

Middleburg Heights, Ohio - August 26, 2022 -
STEVENS Engineers & Constructors is happy to announce that they are offering pre-engineered metal buildings in Indiana. They can provide business owners with pre-engineered metal buildings that can serve as an ideal solution that can help them boost their revenue. Their industrial metal buildings are some of the best investments that a business can make since these are more durable compared to wood buildings and are one of the most effective building alternatives for a business.

Metal buildings can offer the best solution because a business would be able to open the business earlier and begin earning money. There are a number of disadvantages that business owners may encounter when using traditional building materials, such as: limited design options because of the need for columns and load-bearing walls; higher operating costs from maintenance requirements and general wear and tear; more susceptible to damage due to extreme weather conditions, violent storms, and earthquakes; more prolonged construction process; more expenses over the lifetime of the building; and limited design capabilities.

On the other hand, a custom metal building can offer: clear span capabilities, additional customizable components, insulated wall panels for better energy efficiency, minimal maintenance and upkeep requirements, easy future expansion, and availability of designs for a broad range of building types.

Vicki Anderson, CEO of STEVENS Engineers & Constructors, says, "Are you looking for the best pre-engineered buildings near me? At STEVENS, our buildings team can provide advanced Pre-engineered Metal Buildings to streamline your next steel building project in Indianapolis, Indiana. Our prefab metal buildings have unlimited, customizable options to fit your business's specific needs. As one of the best metal building companies in Indiana, we have the steel building experience and knowledge to help you with your steel building kits."

Because of the customizability of their pre-engineered metal buildings, these buildings can be designed for various uses, such as: crane buildings; airplane hangars; commercial buildings; industrial buildings for the chemical, metals, and oil & gas industries; distribution center and metal warehouses; government buildings; recreational metal sports facility; agricultural building; metal medical buildings; server farms and data centers; automotive manufacturing facilities; steel mills; and power & energy industry buildings.

They have partnered with the leading metal building manufacturer in North America, Nucor, which allows them to offer custom steel buildings made from American-made recyclable steel. This ensures that clients will be getting high-quality materials that will help minimize construction costs and keep the building costs low over its lifetime. This is in contrast to constructing a building using lumber, which results in a large amount of construction waste that can't be used again. Structural steel offers the advantage of being one of the most recyclable materials, and any waste can be reused. And even after the metal building has outlived its purpose, it can still be recycled and used again. This means that the business is also using an environment-friendly material.

STEVENS Engineers & Constructors is a company that is backed by over 75 years of experience in providing the best quality construction services. The company began as Stevens Painton Corporation in February 1970 after the merger of Stevens Construction, which was founded in 1919, and Eddie Painton and Associates, which started in 1915. Since then, STEVENS has evolved from its previous role as an excavation contractor and highway bridge builder into a significant player in wastewater treatment plants to its current position in heavy industrial construction. In 1991, they included industrial engineering in their range of services after acquiring CDMG. And finally, in 2009, the company became STEVENS Engineers & Constructors, Inc. The company now focuses on earthwork, pre-engineered metal buildings, structural steel erection, heavy rigging, civil construction, and excavation. They are also experts in construction management and plant maintenance, mechanical equipment setting and alignment, and shutdown and turnaround services.

Those interested in knowing more about the services of a pre-engineered metal building company can visit the STEVENS Engineers & Constructors website or contact them through the telephone or via email.
