

Company in Baltimore Offers Rubber Roofing Installation for Flat Roofs

October 24, 2022

BALTIMORE, MD - October 24, 2022 -
McHenry Roofing, a company based in Baltimore, MD, is pleased to announce that they are capable of offering rubber membrane roofing installation that is usually installed on flat roofs and can help people save on their energy costs. This means that investments made for this roofing will be returned in just a short period of time. When looking for a flat roof specialist near me Baltimore residents can go to McHenry Roofing because they are capable of installing rubber membrane roofs that will not only provide effective insulation but are also durable, which implies significant returns on investments over the long term.

Joseph Conley, owner of McHenry Roofing, says, ?Rubber is such a good insulation that it will keep the heat from the sun from getting into the home or building during sunny days and during wintertime or cold days, it will keep the heat in. This means the HVAC system won?t need to work as much with a rubber roof, which in turn means less energy consumption and lower energy costs.?

Rubber membrane roofs are typically used for flat or low-slope roofs, which are now also being in used for

residential homes although traditionally they have been mostly used for commercial buildings. The previous concern with flat roofs is that it would be harder for the water to flow down into the drain systems, such as the eaves, outlets and drainage holes. However, it is important to note that even flat roofs have a slope that will range from 5 to 15 degrees for purpose of allowing the water to flow into the drain systems.

Flat roofs also offer a unique kind of aesthetics that provides an unobstructed view of the features of a home. And in contrast to the traditional pitched roof, a flat roof is usable space, which means it can be used as a roof garden, a rooftop patio, etc. For those who want to use solar energy, solar panels are also much easier to install on a flat roof.

McHenry Roofing can install a new EPDM rubber roof for a new construction or replace an existing roof to provide a more energy efficient solution that can even provide better protection against winds, hail, fires, and UV radiation. Joseph Conley says, ?All these rubber membrane roofing services are delivered by our seasoned crews with the same high standards of workmanship, reasonable rates and respectful, friendly service.?

Flat roofs have been previously thought to be harder to replace than the conventional pitched shingle roof because of its many layers. However, that is no longer true as current flat roofs are now built using fewer layers due to improved waterproofing technology. And for those who are concerned about water pooling, leakage and other issues, these can be avoided through quality installation, which can be provided by McHenry Roofing.

McHenry Roofing is a roofing company with headquarters located in the Federal Hill neighborhood of Baltimore, MD, and had 3,000+ customers as of 2007. They have been offering a comprehensive range of residential and commercial roofing services for over 27 years.
