

Self Storage Company In Perth Makes Open Space Storage Available To Customers

November 23, 2015

November 23, 2015 - PRESSADVANTAGE -

ABC Self Storage Perth, headquartered in Bibra Lake, WA, Australia, has recently added open space storage facilities to their list of services. The company, which only launched earlier this year as an offshoot of a large shipping container business, has already experienced tremendous successes, which has enabled them to expand their operations this quickly. Full details are available from ABCselfstorageperth.com.au.

"We launched less than a year ago and business has taken off massively since then," says Geoff Campbell from ABC Self Storage Perth. "We decided to think outside the box (excuse the pun) by offering our customers open storage as well. As far as I am aware, we are the only business in the Perth area to offer these solutions and we expect them to be very successful. Preliminary interest is looking really good."

The open space storage is highly secure. Access is only available by appointment and it is the perfect solution for oversized items. Their storage options include boat storage, vintage storage, vehicle storage, caravan storage and space for people to store their own container. These services are very high in demand, particularly for those who use seasonal products such as boats. Full details are available through abcselfstorageperth.com.au/caravan-storage/.

Besides the open space storage option, the company will continue to offer their regular storage facilities as well. These services include easy access self storage and infrequent access managed storage. These options are available in units measuring 8, 10, 20 or 40'. ABC Self Storage Perth also prides themselves on being the most affordable storage facility in the area.

Customers who have used the company have been full of praise. "Cheapest place for storage in Perth by far," says Julian Dyer. "I know my belongings are safe and secure, and it doesn't cost me the world. I recommend ABC Self Storage Perth to anyone."

The business has also released a video on YouTube that shows the different units that they have available and how their storage facility works. This is designed to provide more information to those interested in using storage facilities. It is also an opportunity for the company to introduce itself to potential customers.
