

Dr. Mark Hickman Offers Affordable Vasectomy Reversal

October 25, 2022

New Braunfels, TX - October 25, 2022 - PRESSADVANTAGE -

Dr. Mark Hickman, a surgeon based in New Braunfels, Texas who invented a microsurgical procedure to reverse a vasectomy, is pleased to share that he provides vasectomy reversal at an all-inclusive and reasonable price. Men looking to be able to have children later in life can get the operation from him for a one-time price with no hidden fees. Additionally, it is a surgery that has shown to be helpful for males battling the onset of male depression after undergoing a vasectomy. Dr. Hickman has designed several surgical devices and is a specialist in laparoscopic and minimally invasive telescopic surgery.

The vas deferens, a lengthy, muscular tube that delivers sperm to the urethra in preparation for ejaculation, is repaired via a microsurgical procedure by Dr. Hickman. He reconnects the vas deferens using a strong operating microscope and a fine nylon suture. One of the few vasectomy reversal doctors in the US, Dr. Hickman has nearly 30 years of experience as a minimally invasive surgeon. At this time, he has performed more than 1,300 vasectomy reversals and has also corrected a number of other physicians' vasectomy reversals. Most of his patients come from various locations in Texas, Louisiana, Oklahoma and other states. As a result, he also offers support with regard to the lodging for patients who travel from outside the area. He has negotiated special travel rates with a number of nearby hotels that will enable patients to save as much

as 50% on their accommodation expenses. Dr. Hickman has made the price of a vasectomy reversal more accessible as it is an all-inclusive cost.

Dr. Hickman offers two inexpensive solutions when it comes to vasectomy reversal costs. One choice costs \$3,300 and includes both local anesthetic and an oral sedative. The alternative procedure costs \$4,200 and is carried out while receiving IV sedation from a board-certified anesthesiologist. Both are promised to be all-inclusive, so there are no hidden or additional fees. The direct alignment of the lumens of the two ends of the vas deferens is the special objective of the microsurgical repair of the vas deferens, and a watertight closure is required to produce a significantly greater success rate. Using a microscope, Dr. Hickman will analyze a fluid sample taken from the testicular end of the vas deferens.

The optimal scenario is when complete sperm are present in the fluid, which is the first finding. Second, the fluid is thin and only includes fragments of sperm, not complete sperm. Third, there are no sperm, and the fluid is thick and pasty. The third circumstance, known as an epididymal blowout, is brought on by a blockage. There are two points at which an obstruction could occur. The first is the site of the vasectomy, while the second is a ruptured epididymal tube. In the event that the third scenario arises, Dr. Hickman will have to conduct a vasovasostomy in addition to a vasoepididymostomy, which entails a microscopic invagination of the epididymal tube into the lumen of the vas deferens using a 10-0 nylon suture. Even if both operations are necessary, there will be no extra fee.

Notably, the majority of vasectomy surgeons will carry out a microsurgical vasectomy reversal while under local anesthetic. To find the two ends of the vas deferens and release them from the surrounding scar tissue, a little incision will be made on either side of the scrotal skin. Dr. Hickman works using 10-0 nylon suture and a Zeiss OPMI-MDM operating microscope. The aim is to produce a watertight closure by aligning the lumens of the vas deferens' two ends. Dr. Hickman has also invented several surgical instruments and has been awarded a US patent and recognized as a contributor on several other important minimally invasive patents. He also serves on the Board of Directors of The Institute for Public Education, Health and Research. Learn more here: [Reversing Vasectomy](#).

Those who would like to know more about the vasectomy reversals provided by Dr. Hickman can check out the [Microsurgical Vasectomy Reversals](#) website.
