The Cloud Kennect LinkedIn automation software offers a number of benefits. It facilitates the selection of the target audience for marketing. It is also possible to establish campaigns with follow-ups. The user will just have to create sequences for the first, second, or third degree connections, and then provide the follow up messages as desired and put in some time delays just like it is being done manually. The LinkedIn automation tool will then perform the rest automatically.

This tool also allows the user to make the message stand out by applying tags that automatically fill in the prospect?s name, company, and other details. This tool also has a real-time analytics dashboard that show the most successful campaigns and monitor the health of their account according to their LinkedIn SSI score. Users can also gather important public data about their connections to allow for follow up using various

channels. And finally, users can link Kennected with their CRM software.
