

MDI Comfort Systems Aims to Improve Indoor Air Quality for a Healthier Home

October 25, 2022

October 25, 2022 -
Livonia, Michigan: Many homeowners are unaware of the harmful effects poor indoor air quality can have on their health. MDI Comfort Systems, a local HVAC contractor based in Livonia, Michigan, is looking to change that by educating homeowners on the importance of clean indoor air and offering solutions to improve it. Their team of experts can help assess a home's environment and provide the necessary solutions to ensure all residents are breathing in healthy air.

According to the research, poor indoor air quality is one of the top five environmental risks to public health. In fact, the EPA has ranked it as one of the most serious indoor air quality concerns. Some of the most common pollutants found in homes are mold, dust, pollen, pet dander, and tobacco smoke. These contaminants can cause a variety of health problems, including allergies, asthma and headaches.

Awareness of the dangers of poor indoor air quality is on the rise, but many homeowners are still not sure how to improve the air in their homes. In line with their goal of improving indoor air quality for a healthier

home, MDI Comfort Systems offers innovative and effective solutions.

Marking a departure from its traditional business of providing HVAC services, MDI also offers air quality assessments, product recommendations, and installation services. The first step is an in-home assessment, during which a trained technician will test the air quality and identify any potential sources of pollution. They will then provide recommendations on how to improve the air quality, including what products to use and how to best use them.

As part of their solutions, MDI Comfort Systems installs air purifiers and provides UV kits services that can help eliminate many of the common pollutants found in homes. They also offer duct cleaning services to remove any build-up of contaminants that may be lurking in a house's air ducts.

In addition to the obvious health benefits of improving the air quality in a building, it can also improve energy efficiency. Contaminants in the air can clog up the HVAC system and make it work harder to maintain a comfortable temperature. By reducing the number of pollutants in an indoor space, the HVAC system could run more efficiently and potentially save money on homeowners? energy bills.

With its new focus on air quality, MDI Comfort Systems is setting its footprint in the industry and is poised to make a positive impact on the homes of its customers.
