

Autosock Maker Provides Snow Chain Alternative To Colorado Residents

November 25, 2015

November 25, 2015 - PRESSADVANTAGE -

Rescue Trekker, an online business based in Denver, CO, is proud to make AutoSock available to its customer base. The Colorado snow chain alternative is already proving to be very popular in helping people stay safe on the roads during the heavy Colorado snowfall. To celebrate the launch, Rescue Trekker is offering free shipping, as well as a 10% discount to those who enter code LAUNCH10 at checkout.

"AutoSock is an alternative device to traditional snow chains," says Alex Francis from Rescue Trekker. "They are easier to put on tires than traditional chains, and they can be used on many cars which do not work with traditional metal snow chains. We are happy to be offering these to our customers and feel the roads will be safer for it."

Those who purchase AutoSock will be able to enjoy greater safety and security while behind the wheel. Perhaps most importantly, they will also be fully compliant with the Traction Law and the Vehicle Chain Law, which can be implemented at any point if conditions require it. Not complying with these laws can lead to hefty fines and other penalties.

AutoSock has been certified by leading research institutes. It is approved by various vehicle manufacturers, including Lexus, Toyota, MINI, Mazda and Fiat, to name but a few. Additionally, AutoSock is the only product in its category that is TUV-SUD certified by the world's most respected testing and certification body based in Germany. AutoSock comes in a range of different sizes so that it can fit any type of tire. It can also be fitted in just a few minutes and doesn't require specialized tools or skills.

"AutoSock uses recyclable thermoplastic PET (Polyethylene Terephthalate) to synthesize a special high friction textile fabric," adds Alex Francis. "The fabric's fibers, which become hairier with use, are arranged in a specific pattern in order to optimize grip. Due to the soft textile nature of this non-corrosive and environmentally friendly product, the AutoSock traction aid does not cause expensive damage to road surfaces."

The company offers a variety of safety and first aid products on its website, in addition to the AutoSock.
