Arrowhead Clinic Explains Hearing Loss After A Car Accident

October 27, 2022

Peachtree City, Georgia - October 27, 2022 -
Arrowhead Clinic has updated its blog with a post explaining hearing loss as a common consequence of a car accident. The blog post states that although hearing loss is considered a degenerative condition caused by aging or prolonged exposure to loud sounds, a traumatic injury from a car accident can also cause sudden hearing loss.

The blog post lists various ways in which an accident victim can suffer from loss of hearing after an auto accident. Some other common car accident injuries include whiplash and head trauma.

However, an accident victim might suffer from ear pain, ringing in the ears, or hearing loss after an accident. The leading chiropractic clinic in Georgia emphasizes the need for victims of accidents to file a claim in order to receive financial compensation for their medical bills.

The blog post advises accident victims to see a car accident chiropractor after an accident while listing some of the types of hearing loss. Tinnitus after a car wreck is common.

The blog post explains that it is a condition in which an accident victim perceives sounds that aren?t actually there, which can become worse over a period of time. Head trauma may also be blamed for ear problems after a car crash, according to the car accident doctors at Arrowhead Clinic.

The force of impact can damage inner ear tissue, membranes, or hair cells, rupture eardrums, disrupt the flow to the cochlea, and cause injuries in the middle ear. Additionally, the blog post states that a severe skull fracture can cause broken bones that can pierce the ear canal, which can cause permanent deafness unless treated immediately.

Another common cause of ear injuries is a whiplash injury that can cause severe damage to the inner ear. An accident victim might also suffer from hearing loss due to airbag deployment associated with loud pressure sounds.

The blog post cautions that a hearing loss injury has the potential to greatly impact the victim?s quality of life without timely treatment. They may experience feelings of irritability, fatigue, depression, withdrawal, loneliness, reduced alertness, reduced earning capacity, and diminished overall health.

In addition to physical ailments, an ear injury can have emotional consequences too. A victim of an accident might start avoiding social settings, which would only compound feelings of loneliness, isolation, and depression.

The blog post warns that proving tinnitus from a car crash is always tough for the victim as insurance companies try to prove that tinnitus is not linked to the accident. According to Arrowhead Clinic's accident chiropractors, a victim of an accident should not delay in seeking immediate medical attention for ringing in the ears after a car accident.

The blog post emphasizes the importance of medical records and doctor's notes in helping the accident victim get the best compensation. Additionally, Arrowhead Clinic stresses the need for accident victims to seek legal help from an experienced attorney to negotiate with insurance companies.

The chiropractic clinic has helped numerous accident victims suffering from hearing loss after a car crash. The chiropractors at Arrowhead Clinic are trained and experienced in treating accident injuries resulting from misalignment in the vertebrae.

The blog post explains that vascular and neural problems leading to sudden hearing loss may be the result of misalignments in the vertebrae of the cervical spine. Chiropractic treatment for tinnitus helps in the improvement of symptoms of sudden hearing loss.

Arrowhead Clinic's chiropractors are happy to help accident victims get the best injury treatment. They specialize in the treatment of accident victims and help in their recovery from hearing loss and a myriad of other injuries, helping them get back to normal life.

They can also refer victims to a skilled personal injury attorney to help with their accident injury claims. Arrowhead Clinic also provides free consultations for accident victims to help find out the root cause of the pain and customize a treatment plan accordingly. Schedule a free consultation today on Arrowhead Clinic's website or by calling 800-961-7246.
