

Piedmont Foundation Repair Offers Limited Access Drilling in Charlotte NC

November 07, 2022

November 07, 2022 -

Piedmont Foundation Repair, a specialty foundation repair contractor based in Matthews, NC, is happy to announce that they are offering limited access drilling in Charlotte, NC and neighboring areas. Limited access drilling is used to reinforce deflecting wood retaining and basement walls. This method is designed for those situations when there is limited headroom and extremely tight spaces. Recently, they have published a YouTube video about their limited access drilling work to install soil nails to repair the foundation for a bridge in Lowell, NC.

Chris Murrmann, owner of Piedmont Foundation Repair, says, ?A quick fix isn?t what you?re looking for when it comes to foundation repair services. Get the job done right by calling Piedmont Foundation Repair. We proudly serve the Mooresville and Charlotte, NC areas. We will use the latest and most trusted techniques to complete the project properly and give you permanent results. We have the knowledge, the equipment and most important, passion to help resolve all your foundation and crawl space issues.?

Foundation problems can result from poor drainage, inexperienced construction, and soil problems such as poor compaction and expansion. In North Carolina, the soil is mostly expansive red clay and expansive soil is

one of the primary reasons for foundation problems. Fortunately, Piedmont Foundation Repair has been able to address those problems many times.

There are a number of indications that a home or building may be suffering from a foundation issue. These include: cracks in exterior or interior brick; displaced or cracked moldings; uneven or sloping floors; doors and windows not working properly; spaces between wall and ceiling or wall and floor; and cracks in walls. Those who notice such issues in their home are encouraged to call a foundation repair professional and not wait until the problem becomes worse or it might be too late.

Piedmont Foundation Repair employs various proven techniques to repair foundations and crawl spaces. One such technique is waterproofing the basement and the rest of the property as a way to minimize any future issues. This is because water is often the primary cause of damage to the foundation and structures. If this issue is just left untreated, it can worsen into a more serious issue and require a more expensive repair. Another technique they can use is the use of micropiles, which are deep foundation elements that can be used for any type of base or soil. Even with their small diameters, they are capable of holding hundreds of tons of weight. The third technique is soil nailing, which can be used to address unstable soil on slopes that can result into foundation damage. This is important because reinforcing the soil is a way to repair a foundation. And finally, rock anchors can be provided to stabilize the structure into the foundation.

Piedmont Foundation Repair (PFR) can also provide crawl space repair. A crawl space may sometimes be found in a home in place of a basement. It is a smaller space and typically just large enough for a person to crawl through. Its purpose is to provide access to plumbing and electrical wires. Problems with a crawl space may be present such as floors above the crawl space that are sinking or dipping below other spaces. Moisture and humidity can also affect the indoor air quality.

Piedmont Foundation Repair is a specialty foundation repair contractor with over 25 years of experience. They have the capability to service all kinds of foundation repair needs, such as micro piles, soil nails, mud jacking, structural wood rot repair, and helical piers. They are also a specialist and are qualified to provide waterproofing and crawl space air quality control, including moisture control and mold remediation services. They are specialists in limited access drilling for reinforcing deflecting wood retaining and basement walls. They have the experience, knowledge and equipment to offer a solution for all foundation and crawl space problems.
