

New Healthy BPA Free Fruit Infuser Water Bottle For Active People Released

November 25, 2015

November 25, 2015 - PRESSADVANTAGE -

Water-Licious, a business in Danville, CA, is proud to have launched their fruit infuser water bottle. The product can be seen on <http://amzn.to/1MXfXvN>. Targeted at people who live an active and healthy lifestyle, the bottle is already proving to be very popular.

"We wanted to create a product that is of premium quality, that does not cause any harm, and that is geared specifically towards those with an active lifestyle," says Heide Fraser from Water-Licious. "This was the motivation behind our fruit infused water bottle, that is 100% BPA free and made from Tritan Copolyester plastic."

The bottle has been designed to enable people to make their own healthy water, infused with their favorite fruits and/or vegetables. It reduces the need for people to purchase bottled water or, worse still, energy drinks that are full of sugars. People are encouraged to try it with a variety of different ingredients, helping them to cleanse their body and stay hydrated.

The product immediately grabbed the attention of the general public and received many positive reviews.

"This infused bottle is exactly what I needed to keep myself motivated to drink more water," says one reviewer. "The bottle itself is designed beautifully. That top also renders the bottle leak-proof, which for me is a necessity, as I throw it in my gym bag. The handle also makes it convenient to carry around the gym with me as I'm working out."

Others are encouraged to leave their own review on the company's social networking page, accessible through

https://business.facebook.com/waterliciouswaterbottles/?ref=bookmarks&business_id=1471618259813891. This will also enable them to remain up to date with any special offers, promotional events and any future products that the business will release.

The bottle is made of Tritan Copolyester plastic, which is shatter proof and dishwasher safe. The easy carry handle allows users to carry it with them wherever they go, be that to the gym, an outdoor hike or any other activity. One of the things the company says truly set this product apart is that the fruit is not contained in the bottom of the bottle, but rather in the middle.
