Southeast Softwash LLC Offers Worlds First High Flow Metering Valve

December 21, 2022

December 21, 2022 -
Southeast Softwash LLC, a company based in Roanoke, AL, has announced that they are offering the world?s first purpose built metering valve for softwashing. There were other valves in the past, but none purpose built or high flow to keep up with the demands of electric or gas pumps. Southeast Softwash has more than 30 years of experience and is the leading company in providing chemicals, parts, training, and turn key systems for softwashing.

Coty Yarbrough, CEO of Southeast Softwash LLC, says, ?We are excited to announce the world?s first purpose made softwash metering valve. Capable of accepting half inch, or 1 inch connections, this is a lifetime system. If you grow your equipment overtime, your manifold can now grow with you, saving you tons of money over the lifetime of use. All batch-buster valves are a 1? body for optimal liquid flow, each valve will ship with both 1/2? and 1? coupler kits. This has been tested to over 100,000 gallons of continuous flow with 12.5% sodium hypochlorite. And we now have the super ball as an available option. It allows for 50 percent more flow, which means less wear and tear on the pump and further reach. If you are running a higher flow system, you?ll want the super ball version. We recommend setting up both water and bleach lines together in order to maintain accurate ratios.?

Softwashing has been gaining in popularity because of the many advantages of softwashing the exterior of a home or building. First, having a very clean exterior can help in boosting the home?s curb appeal, with the resulting increase in market value. Exterior washing done regularly is essential because different types of weather can gradually cause the exterior of the home or building look shabby. Dirt and grime will pile up on the home?s exterior over time, resulting into stains, blotches, and streaks on the sidings, driveways, sidewalks, roofs, and more. The relatively low pressure provided by softwashing is strong enough to eliminate all of those dirt and stains while not causing damage to the wood and other materials. This means that softwashing can make the exterior of the home look like new once more. In addition, it can also help improve the health of members of the family and all those residing in the home because it gets rid of mold and mildew.

Southeast Softwash LLC offers the Batch Buster blend manifold, which is the world?s first purpose built Softwash Metering Valve System. While there have been other similar systems in the past, this particular metering valve system is the first to have been developed specifically for use with softwashing systems and provides superior results. First of all, the bleach percentages can easily be seen on the dial. The readout range is from 0 to 6 percent. Second, it is available in 1-inch and 1/2-inch couplers, allowing it to be used for 12v or 24v or gas. The sized-up couplers are part of the package free of charge. Third, this Batch Buster valve system will grow with the business. For those who will be upgrading from 12v to 24v in the future, the Batch Buster system is the first valve to permit the use of the same valve body for both systems. All that will be needed is to change the couplers from 1/2-inch to 1-inch and then re-run the plumbing. Furthermore, it has built-in backflow preventers, which make sure that there will be no cross-contamination between tanks.

Southeast Softwash LLC established their equipment manufacturing division in 2018 and since then, they have grown into one of the largest turn-key equipment provider for softwashing throughout the world. They offer softwashing components and supplies, such as wands/manifolds, pumps, chemicals, tips/nozzle holders, surface cleaners, hoses/hose reels, and more.

Those who would like to learn more about the available soft wash system parts and supplies, such as a proportioner, can visit the Southeast Softwash LLC website or contact them through the telephone or via email.
