

Dissolvalloy Releases New Revolutionary Frac Balls

November 30, 2015

November 30, 2015 - PRESSADVANTAGE -

Dissolvalloy, a business in Porter, TX, is proud to have launched a new piece of equipment for the fracking industry. Their frac balls have been designed to replace the traditional balls used in hydraulic fracturing (fracking). Further details are available at <http://dissolvalloy.com/>.

"Traditional hydraulic fracturing balls have been very limited in their usage by their very nature," says Scottie McDonald from Dissolvalloy. "Our new frac balls have been designed to address the limitations of the conventional frac balls. We bring greater strength and toughness and our balls are more dependable, dissolvable and customizable than any other frac ball ever released to the market. Plus, we make sure that they are always available."

Fracking as an industry started in this country some six decades ago. It is now one of the most important methods of producing gas and oil for the domestic market. While currently controversial, it is undeniable that it is also incredibly innovative. The frac ball has been pivotal to that innovation.

Further details about the Dissolvalloy frac ball are available through <https://vimeo.com/133493987>. This video gives details on how the balls work and why they are so vital to the industry. Most importantly, it is outlined why these frac balls are different from others in the industry. "Essentially, the frac balls are inserted into the

wells in order to build the ground pressure up," explains Scottie McDonald. "The pressure then actually fracks the identified area. There are balls of different sizes, depending on the application in which they will be used. Our balls can take on the highest amounts of both pressure and temperature. By making them dissolvable, we have ensured they are more functional and efficient, saving businesses both time and money."

People are encouraged to visit the company's Facebook page on <https://www.facebook.com/dissolvalloy> and to give them a 'Like'. This will enable them to directly ask questions and join in on the conversation about the merits of the Dissolvalloy frac balls. Additionally, the page is used to share industry relevant information. Finally, the Facebook page will be used to share information on any special offers, promotions or new product developments.
